Board of Trustees
City of Southfield
Employees Retirement System
Southfield, Michigan

**Re: City of Southfield Employees Retirement System Actuarial Valuation as of June 30, 2024
Actuarial Disclosures**

Dear Trustees:

The results of the June 30, 2024 Annual Actuarial Valuation of the City of Southfield Employees Retirement System are presented in this report.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the Retirement System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The purposes of the valuation are to measure the System's funding progress and to determine the employer contribution rate for the fiscal year ending June 30, 2026. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results, associated with the benefits described in this report, for purposes other than those identified above may be significantly different. A separate report will be issued to provide actuarial information for GASB Statements No. 67 and No. 68.

The contribution rate in this report is determined using the actuarial assumptions and methods disclosed in Section C of this report. This report includes risk metrics in Appendix 2 but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment.

This valuation assumes the continuing ability of the participating employer to make the contributions necessary to fund this System. A determination regarding whether or not the participating employer is actually able to do so is outside our scope of expertise and was not performed.

The findings in this report are based on data and other information through June 30, 2024. The valuation was based upon information furnished by the City, concerning Retirement System benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal reasonability and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by the City.

This report was prepared using assumptions adopted by the Board. All actuarial assumptions used in this report are reasonable for the purposes of this valuation. The combined effect of the assumptions is expected to have no significant bias (i.e., not significantly optimistic or pessimistic). All actuarial assumptions used in the valuation follow the guidance in the applicable Actuarial Standards of Practice. Additional information about the actuarial assumptions is included in Section C of this report.

We have assessed that the contribution rate calculated under the current funding policy is a reasonable Actuarially Determined Employer Contribution (ADEC) and it is consistent with the plan accumulating adequate assets to make benefit payments when due.

This report was prepared using our proprietary valuation model and related software which, in our professional judgment, has the capability to provide results that are consistent with the purposes of the valuation, and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge, the information contained in this report is accurate and fairly presents the actuarial position of the City of Southfield Employees Retirement System as of the valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices, with the Actuarial Standards of Practice issued by the Actuarial Standards Board and with applicable statutes.

Casey T. Ahlbrandt-Rains and Jeffrey T. Tebeau are Members of the American Academy of Actuaries (MAAA). These actuaries meet the Academy's Qualification Standards to render the actuarial opinions contained herein.

The signing actuaries are independent of the plan sponsor.

Gabriel, Roeder, Smith & Company will be pleased to review this valuation and report with the Board of Trustees and to answer any questions pertaining to the valuation.

Respectfully submitted,
Gabriel, Roeder, Smith & Company

Casey T. Ahlbrandt-Rains, ASA, FCA, MAAA

Jeffrey T. Tebeau, FSA, EA, FCA, MAAA

CTA/JTT:sc
C0460

SECTION A

VALUATION RESULTS

Funding Objective

The funding objective of the Retirement System is to establish and receive contributions which, expressed as a percent of active member payroll, will remain approximately level from year-to-year and will accumulate sufficient assets over each member's working lifetime to finance promised benefits throughout retirement.

Contribution Rates

The Retirement System is supported by member contributions, City contributions and investment income from Retirement System assets.

Contributions which satisfy the funding objective are determined by the annual actuarial valuation and are sufficient to:

- Cover the actuarial present value of benefits allocated to the current year by the actuarial cost method described in Section C (the normal cost); and
- Finance over a period of future years the actuarial present value of benefits not covered by valuation assets and anticipated future normal costs (unfunded actuarial accrued liability).

The computed City contribution rate for the 2026 fiscal year is 26.97% of covered payroll. The details of this contribution rate are shown on page A-2.

The City contribution rate of 26.97% is intended to finance the employer normal cost and to amortize the unfunded actuarial accrued liability as a level percent-of-payroll over a period of 19 years.

The Board of Trustees of the City of Southfield Employees Retirement System confirms that the System provides for payment of the required employer contribution as described in Section 20m of Michigan Public Act No. 728.

Contributions to Provide Benefits for the 2026 Fiscal Year

Contributions for	Contributions Expressed as % of Active Member Payroll					
	Union	PSS	Public Safety Tech.	Total Without Non Union	Non Union	Total
Pension						
<i>Normal cost</i>						
Age & service	9.74 %	9.28 %	8.74 %	9.68 %	9.95 %	9.76 %
Disability	0.47	0.65	0.73	0.49	0.53	0.50
Death-before-retirement	0.21	0.26	0.20	0.21	0.18	0.20
Refunds of member contributions	1.21	1.02	0.93	1.19	1.02	1.14
Administrative expenses	0.58	0.58	0.58	0.58	0.58	0.58
Total	12.21	11.79	11.18	12.15	12.26	12.18
Member contributions (average)	6.87	7.00	6.66	6.86	6.00	6.60
Employer normal cost	5.34	4.79	4.52	5.29	6.26	5.58
<i>Full funding credit ⁽¹⁾</i>						0.00
<i>Unfunded actuarial accrued liabilities ⁽¹⁾</i>						21.39
Employer Pension Total						26.97 %
Minimum Dollar Contribution						\$5,887,125

⁽¹⁾ Amortized as a level percent-of-payroll over a period of 19 years. Includes the effects of the lag between the valuation date and the contribution period.

Determining Employer Dollar Contributions

For any period of time, the percent-of-payroll contribution rate needs to be converted to dollars and then contributed to the Retirement System in a timely manner.

The recommended and current procedure is: (1) **at the end of each payroll period, multiply the active member payroll for the period by the employer contribution percent**; and (2) **contribute the dollar amount so determined**.

The projected employer dollar contribution based on the payroll information provided for the valuation, adjusted to reflect assumed payroll increases between the valuation date and the fiscal year for which the contributions are being determined, is \$5,887,125. **Therefore, we suggest a minimum contribution of this amount. Please see comments on page A-10.**

Valuation Assets and Unfunded Actuarial Accrued Liability June 30, 2024

In financing the actuarial accrued liabilities, the valuation assets of \$123,334,524 were distributed as follows:

Reserves for	Present Assets Applied to			Total
	Active & Inactive Member Accrued Liabilities	Retired Life Liabilities	Contingency Reserve	
Employees' Contributions	\$ 8,300,004			\$ 8,300,004
Employer Contributions				0
Retired Benefit Payments		\$115,034,520		115,034,520
Pension Total	\$ 8,300,004	\$115,034,520	none	\$123,334,524

Assets were applied against actuarial accrued liabilities in determining unfunded actuarial accrued liabilities as follows:

	Active and		Total
	Retired Lives	Inactive Members	
Computed Actuarial Accrued Liabilities	\$125,238,480	\$60,078,617	\$185,317,097
Applied Assets	115,034,520	8,300,004	123,334,524
Unfunded Actuarial Accrued Liabilities	\$ 10,203,960	\$51,778,613	\$ 61,982,573

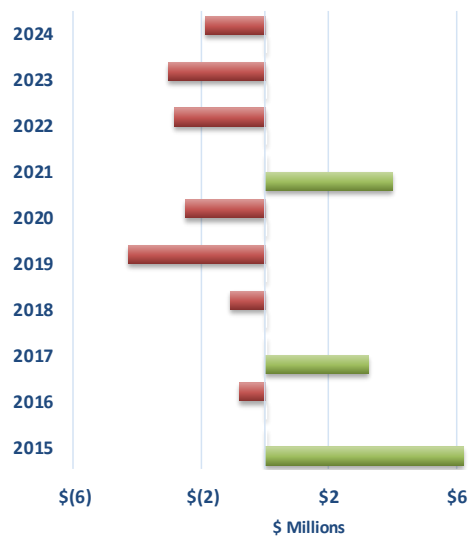

Derivation of Experience Gain (Loss) Year Ended June 30, 2024

Actual experience will never (except by coincidence) coincide exactly with assumed experience. Gains and losses often cancel each other over a period of years, but sizable year-to-year fluctuations are common. Detail on the derivation of the experience gain (loss) is shown below, along with a year-by-year comparative schedule.

(1) UAAL* at start of year	\$ 61,306,812
(2) Total normal cost from last valuation (employer + member)	2,582,386
(3) Actual contributions (employer + member)	7,879,368
(4) Interest accrual: $[(1) + 1/2 [(2) - (3)]] \times 7\%$	4,106,082
(5) Expected UAAL before changes: (1) + (2) - (3) + (4)	60,115,912
(6) Change from revised assumptions/methods	0
(7) Change from revised plan provisions	0
(8) Expected UAAL after changes: (5) + (6) + (7)	60,115,912
(9) Actual UAAL at end of year	61,982,573
(10) Total gain (loss): (8) - (9)	(1,866,661)
As a percent of AAL at the start of the year: (10) / (13)	(1.0)%
(11) Investment gain (loss)	1,742,216
As a percent of AAL at the start of the year: (11) / (13)	1.0%
(12) Liability gain (loss): (10) - (11)	(3,608,877)
As a percent of AAL at the start of the year: (12) / (13)	(2.0)%
(13) Actuarial Accrued Liabilities at start of year	180,113,387

* *Unfunded actuarial accrued liabilities (full funding credit if in brackets).*

Total Gains/Losses - Past 10 Years

Summary Statement of System Resources and Obligations

June 30, 2024

Present Resources and Expected Future Resources

	June 30, 2024	June 30, 2023
A. Actuarial value of System assets:		
1. Net assets from System financial statement	\$127,949,018	\$120,381,684
2. Market value adjustment	(4,614,494)	(1,575,109)
3. Actual valuation assets	123,334,524	118,806,575
 B. Present value of expected future contributions:		
1. For normal costs	6,364,901	5,787,232
2. For unfunded actuarial accrued liabilities	61,982,573	61,306,812
3. Totals	68,347,474	67,094,044
 C. Present value of expected future member contributions	9,717,467	8,715,666
 D. Total Present and Expected Future Resources	\$201,399,465	\$194,616,285

Actuarial Present Value of Expected Future Benefit Payments

A. To retirees and beneficiaries	\$125,238,480	\$126,749,211
B. To vested terminated members	7,280,506	6,651,404
C. To present active members:		
1. Allocated to service rendered prior to valuation date	52,798,111	46,712,772
2. Allocated to service likely to be rendered after valuation date	16,082,368	14,502,898
3. Totals	68,880,479	61,215,670
 D. Total Actuarial Present Value of Expected Future Payments	\$201,399,465	\$194,616,285

* Retirement System amended.

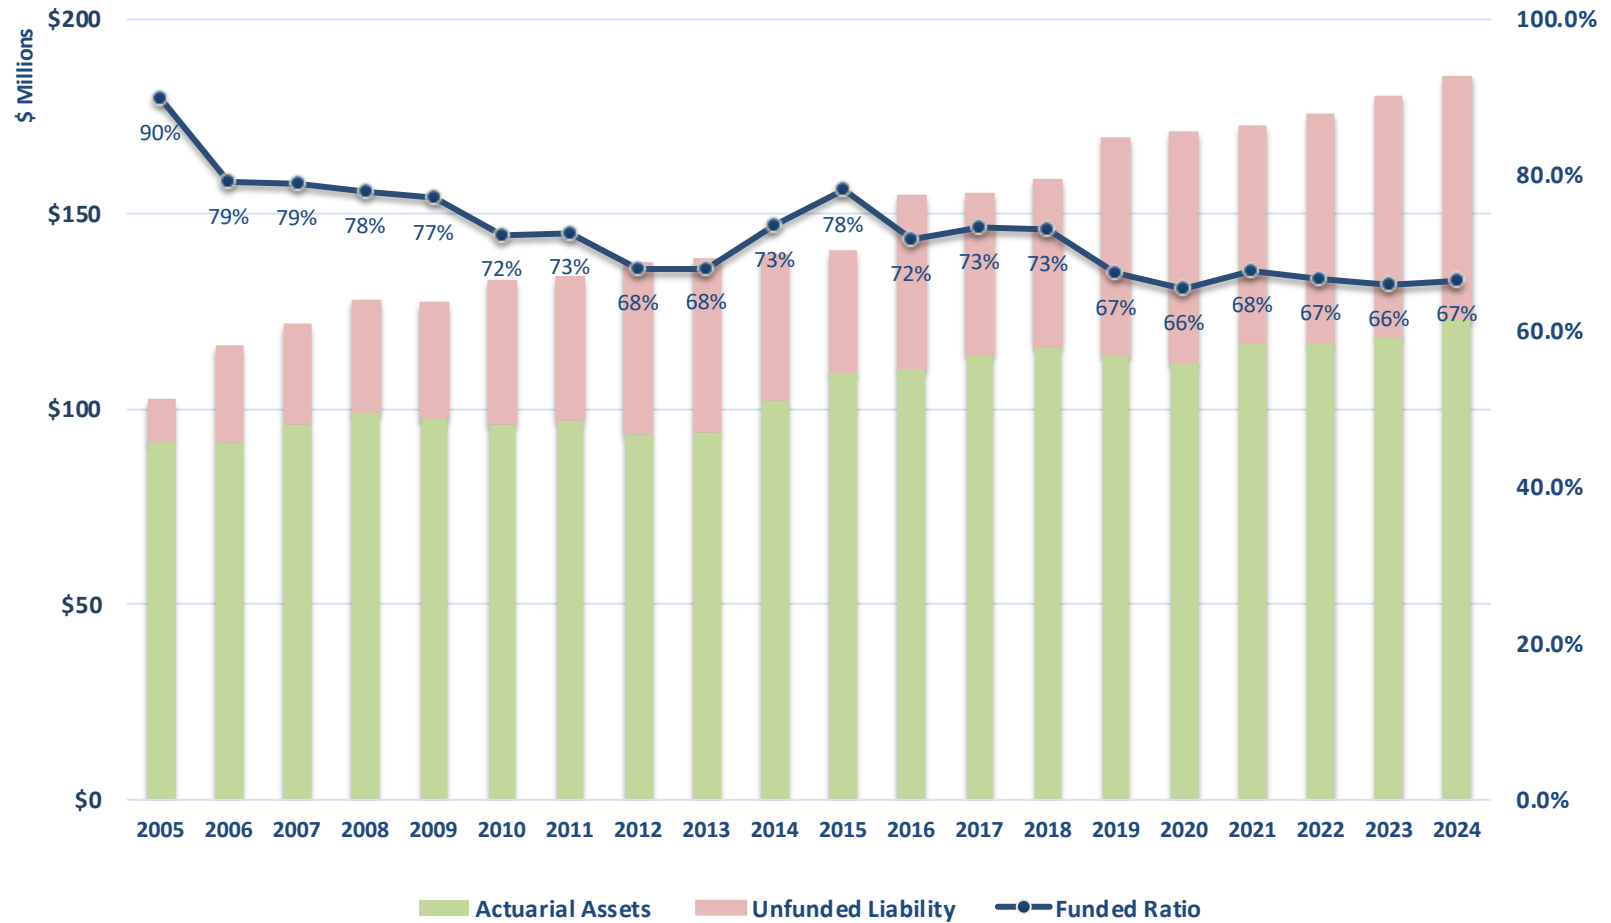

Revised actuarial assumptions and methods.

The Ratio of Valuation Assets to AAL is a traditional measure of a System's funding progress. Except in years when the System is amended or actuarial assumptions are revised, this ratio can be expected to gradually trend toward 100% if actuarial assumptions are met.

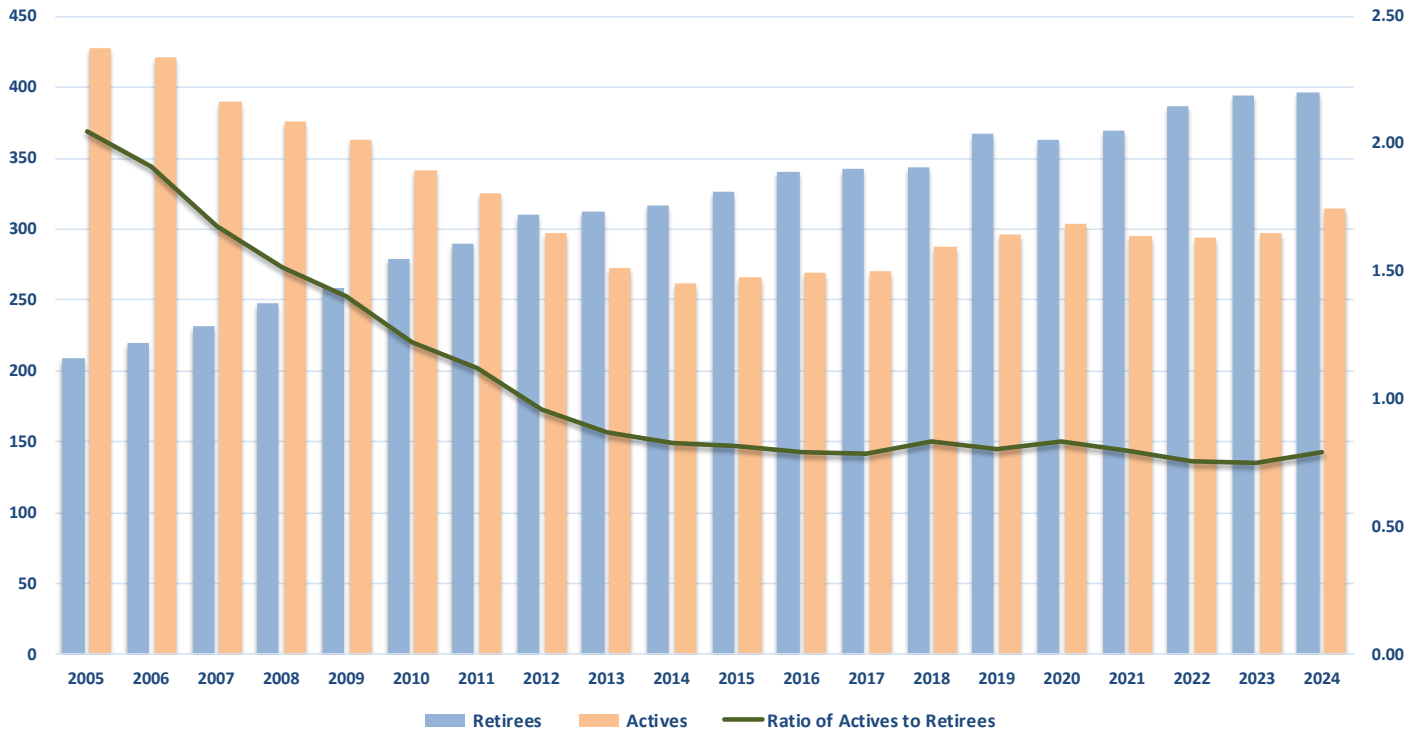

The Ratio of UAAL to Valuation Payroll is another relative index of condition. Unfunded actuarial accrued liabilities represent debt, while active member payroll represents the System's capacity to collect contributions to pay toward debt. The lower the ratio, the greater the financial strength, or vice-versa.

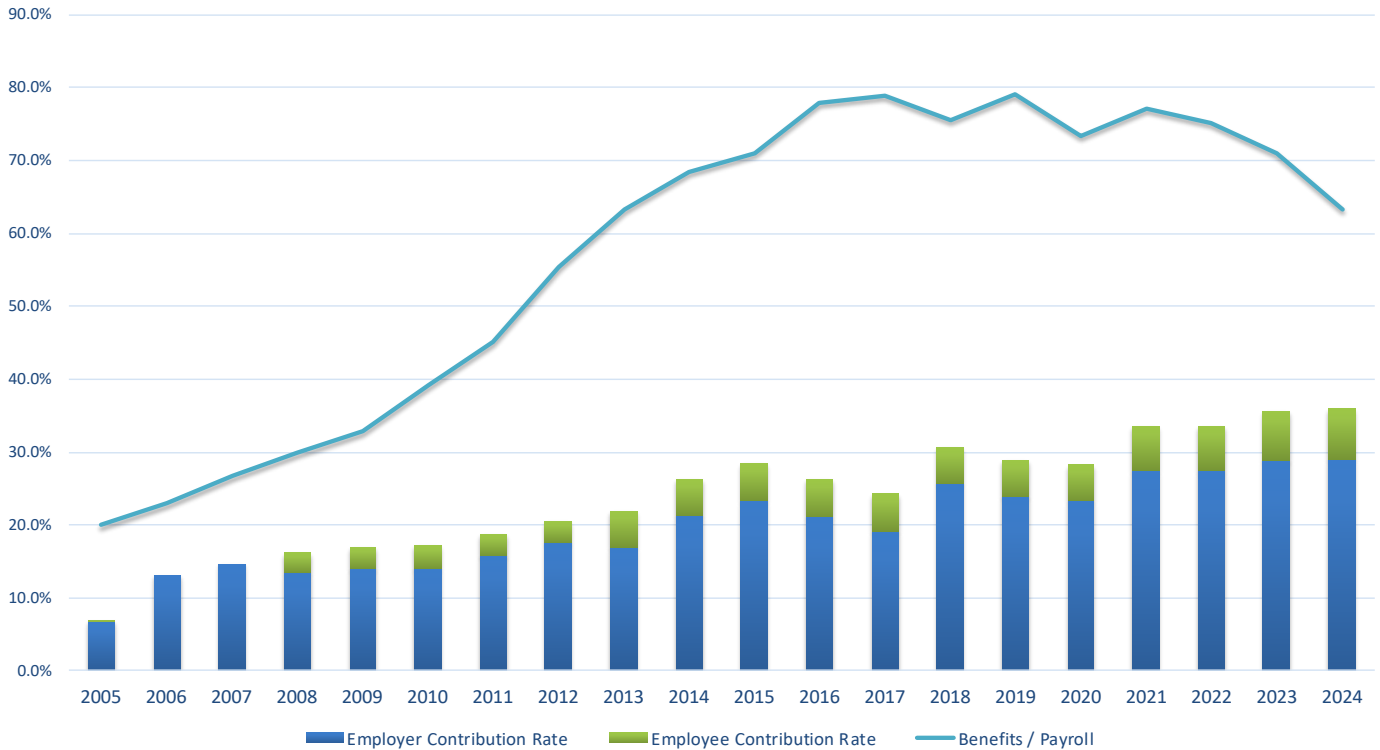

Assets and Unfunded Liabilities

Active and Retired Population

Contributions and Benefits as a Percent-of-Payroll

Comments

Funded Status

As of June 30, 2024, the funded ratio of the Retirement System is 66.6% based on the funding value of assets, which is higher than last year's ratio of 66.0%. The funded ratio is 69.0% based on the market value of assets.

System Experience

Overall, fund experience was less favorable than assumed during the year ending June 30, 2024, producing an experience loss of approximately \$1.9 million. This loss is primarily attributable to larger-than-assumed pay increases and lower-than-expected retiree mortality.

The market rate of return was 10.97% for the fiscal year ended June 30, 2024. The valuation process employs a smoothing mechanism which recognizes investment gains and losses over a five-year period. Therefore, 20% of this year's gain is recognized in this year's funding value of assets. The recognized portion of gains and losses from the prior four years was then combined with the recognized portion of the gain from this year (see page B-17) resulting in a rate of return on the System's funding value of assets of 8.50%, which was higher than the assumed rate of return of 7.00%. As of June 30, 2024, the Funding Value of assets is approximately \$4.6 million lower than the Market Value. In the absence of offsetting unfavorable experience, contribution rates are expected to trend downward over the next four years due to recognition of investment gains.

Reserve for Retired Benefit Payments

Please note on page A-3 that the liability associated with retiree and beneficiary lives is less than fully funded. It is important that the System receive contributions at least equal to the rates shown in this report. As noted previously, the recommended contribution rates should be considered contribution minimums.

Benefit Changes

There were no benefit changes reported to the actuary since the prior actuarial valuation.

Assumption/Method Changes

There were no assumption or method changes since the prior actuarial valuation.

Other Observations

Funding Policy and Future Expected System Contributions and Funded Status

Given the System's funding policy, if all actuarial assumptions are met (including the assumption of the System earning 7.0% on the funding value of assets), it is expected that:

- (1) The employer normal cost as a percentage of pay will trend to the level of the Blended Plan normal cost as Tier I and II employees exit the active population and are replaced by new Blended Plan employees;
- (2) The unfunded actuarial accrued liabilities will increase for several years before decreasing and is expected to be fully amortized by June 30, 2044; and
- (3) The funded status of the plan will increase gradually towards a 100% funded ratio.

Limitations of Funded Status Measurements

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regard to any funded status measurements presented in this report:

- (1) The measurement is inappropriate for assessing the sufficiency of System assets to cover the estimated cost of settling the System's benefit obligations; for example, transferring the liability to an unrelated third party in a market value type transaction.
- (2) The measurement is dependent upon the actuarial cost method which, in combination with the System's amortization policy (funding policy), affects the timing and amounts of future contributions. The amounts of future contributions will most certainly differ from those assumed in this report due to future actual experience differing from assumed experience based upon the actuarial assumptions. The current funded status is 66.6%. Even if the funded status measurement in this report was 100%, it would not be synonymous with no required future contributions. If the funded status were 100%, the System would still require future normal cost contributions (i.e., contributions to cover the cost of the active membership accruing an additional year of service credit).

Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the System's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. **Investment Risk** – actual investment returns may differ from the expected returns;
2. **Asset/Liability Mismatch** – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. **Contribution Risk** – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
4. **Salary and Payroll Risk** – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. **Longevity Risk** – members may live longer or shorter than expected and receive pensions for a period of time other than assumed; and
6. **Other Demographic Risks** – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The computed contribution shown on page A-2 may be considered as a minimum contribution rate that complies with the Board's funding policy. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security. Please see Appendix 2 for an additional discussion of risk.

SECTION B

SUMMARY OF BENEFIT PROVISIONS AND VALUATION DATA

Summary of Benefit Provisions Evaluated

June 30, 2024

Tier I Members

Regular Retirement (no reduction factor for age)

Eligibility - Sum of age and service equals 82, or age 65 with 5 or more years of service.

Annual Amount - Total service times 2.5% of FAC.

Type of Final Average Compensation - Highest 3 consecutive years out of last 5.

Normal Form of Payment - Ten-year certain and life.

Early Retirement (age reduction factor used)

Eligibility - Age 57 with 20 or more years of service or age 60 with 10 years of service.

Annual Amount - Computed as regular retirement, but reduced 1/2 of 1% for each month by which retirement date precedes attainment of age 62 with 20 or more years of service or age 65 with 10 or more years of service.

Deferred Retirement (vested benefits)

Eligibility - 10 or more years of service. Reduced benefit may begin at age 60 with 10 or more years of service. Full benefit eligibility at age 57 with 25 or more years of credited service; or 62 with 20 to 25 years of credited service; or 65 with 10 to 20 years of credited service, or sum of frozen years of credited service plus age equals 82 points.

Annual Amount - Computed as regular retirement but based upon service and final average compensation and benefit levels in place at termination of covered employment.

Duty Disability

Eligibility - No service requirement.

Annual Amount - Computed as a regular retirement with additional service credit granted from date of disability to age 60 if under age 60. Worker's Compensation payments are offset.

Summary of Benefit Provisions Evaluated June 30, 2024 Tier I Members (Continued)

Non-Duty Disability Retirement

Eligibility - 10 years of service.

Annual Amount - Computed as regular retirement but based upon service and final average compensation at commencement of disability.

Death-in-Service

Eligibility - 10 years of service.

Annual Amount - Computed as regular retirement but based upon service and final average compensation on the day before death.

Member Contributions

AFSCME: 7.41%, made as a salary reduction under 414(h).

Management and ACS: 6.00%, made as a salary reduction under 414(h).

All Others: 7.00%, made as a salary reduction under 414 (h).

Refund of Member Contributions

Public Safety Technicians - Member receives a refund of account balance as of 6/30/95 (with interest) upon commencement of Normal Retirement, Early Retirement, Disability Retirement, Death-in-Service or Deferred Retirement benefits.

Others - Member receives a refund of account balance as of 6/30/2009 (with interest) upon commencement of Normal Retirement, Early Retirement, Disability Retirement, Death-in-Service or Deferred Retirement benefits. (The recently added member contribution requirements are excluded from this refund provision.)

Summary of Benefit Provisions Evaluated

June 30, 2024

Tier I Members

(Concluded)

Covered Compensation

Items of compensation recognized for Retirement System purposes include: base salary, longevity pay, pay in lieu of holiday and/or vacation time for the current year, lump sum vacation payoff at retirement up to 400 hours maximum, and residency bonus. Items of compensation not recognized for retirement purposes are overtime pay, expense allowances, and lump sum payments at retirement in consideration of unused sick leave.

Tier I Members Definition

Tier I members are defined as:

- PST members hired prior to February 2, 2009;
- PSS members hired prior to March 2, 2009;
- AFSCME 329 members hired prior to April 23, 2007;
- AFSCME 3636 members hired prior to March 6, 2007;
- TPOAM members hired prior to April 9, 2007;
- 46th District Court members hired prior to September 1, 2005; and
- All other covered employees hired prior to June 1, 2005.

Summary of Benefit Provisions Evaluated

June 30, 2024

Tier II Members

Regular Retirement (no reduction factor for age)

Eligibility - Age 57 with 25 years of service, age 62 with 20 years of service, or age 65 with 10 or more years of service.

Annual Amount - Total service times 2.0% of FAC. Maximum benefit is 70% of FAC.

Type of Final Average Compensation - Highest 5 consecutive years out of last 10.

Normal Form of Payment - Ten-year certain and life.

Early Retirement (age reduction factor used)

Eligibility - Age 57 with 20 or more years of service or age 60 with 10 years of service.

Annual Amount - Computed as regular retirement, but reduced 1/2 of 1% for each month by which retirement date precedes attainment of age 62 with 20 or more years of service or age 65 with 10 or more years of service.

Deferred Retirement (vested benefits)

Eligibility - 10 or more years of service. Reduced benefit may begin at age 60 with 10 or more years of service. Full benefit eligibility at age 57 with 25 or more years of credited service; or 62 with 20 to 25 years of credited service; or 65 with 10 to 20 years of credited service.

Annual Amount - Computed as regular retirement but based upon service and final average compensation and benefit levels in place at termination of covered employment.

Duty Disability

Eligibility - No service requirement.

Annual Amount - Computed as a regular retirement with additional service credit granted from date of disability to age 60 if under age 60. Worker's Compensation payments are offset.

Summary of Benefit Provisions Evaluated June 30, 2024 Tier II Members (Continued)

Non-Duty Disability Retirement

Eligibility - 10 years of service.

Annual Amount - Computed as regular retirement but based upon service and final average compensation at commencement of disability.

Death-in-Service

Eligibility - 10 years of service.

Annual Amount - Computed as regular retirement but based upon service and final average compensation on the day before death.

Member Contributions

AFSCME: 7.41%, made as a salary reduction under 414(h).

Management and ACS: 6.00%, made as a salary reduction under 414(h).

All Others: 7.00%, made as a salary reduction under 414 (h).

Refund of Member Contributions

None.

Covered Compensation

Items of compensation recognized for Retirement System purposes include: base salary, longevity pay, pay in lieu of holiday and/or vacation time for the current year, lump sum vacation payoff at retirement up to 100 hours maximum, and residency bonus. Items of compensation not recognized for retirement purposes are overtime pay, expense allowances, and lump sum payments at retirement in consideration of unused sick leave.

Summary of Benefit Provisions Evaluated June 30, 2024 Tier II Members (Concluded)

Tier II Members Definition

Tier II members are defined as:

- PST members hired on or after February 2, 2009;
- PSS members hired on or after March 2, 2009;
- AFSCME 329 members hired on or after April 23, 2007;
- AFSCME 3636 members hired on or after March 6, 2007;
- TPOAM members hired on or after April 9, 2007;
- 46th District Court members hired on or after September 1, 2005; and
- All other covered employees hired on or after June 1, 2005.

Tier II excludes employees hired after October 7, 2022 (May 17, 2023 for Management employees).

Summary of Benefit Provisions Evaluated June 30, 2024 Blended Plan Members (DB Portion Only)

Regular Retirement (no reduction factor for age)

Eligibility - Age 57 with 25 years of service, age 62 with 20 years of service, or age 65 with 10 or more years of service.

Annual Amount - Total service times 1.5% of FAC. Maximum benefit is 70% of FAC.

Type of Final Average Compensation - Highest 3 consecutive years out of last 5.

Normal Form of Payment - Ten-year certain and life.

Early Retirement (age reduction factor used)

Eligibility - Age 57 with 20 or more years of service or age 60 with 10 years of service.

Annual Amount - Computed as regular retirement, but reduced 1/2 of 1% for each month by which retirement date precedes attainment of age 62 with 20 or more years of service or age 65 with 10 or more years of service.

Deferred Retirement (vested benefits)

Eligibility - 10 or more years of service. Reduced benefit may begin at age 60 with 10 or more years of service. Full benefit eligibility at age 57 with 25 or more years of credited service; or 62 with 20 to 25 years of credited service; or 65 with 10 to 20 years of credited service.

Annual Amount - Computed as regular retirement but based upon service and final average compensation and benefit levels in place at termination of covered employment.

Duty Disability

Eligibility - No service requirement.

Annual Amount - Computed as a regular retirement with additional service credit granted from date of disability to age 60 if under age 60. Worker's Compensation payments are offset.

Summary of Benefit Provisions Evaluated June 30, 2024 Blended Plan Members (DB Portion Only) (Concluded)

Non-Duty Disability Retirement

Eligibility - 10 years of service.

Annual Amount - Computed as regular retirement but based upon service and final average compensation at commencement of disability.

Death-in-Service

Eligibility - 10 years of service.

Annual Amount - Computed as regular retirement but based upon service and final average compensation on the day before death.

Member Contributions

5.00%, made as a salary reduction under 414(h).

Refund of Member Contributions

None.

Covered Compensation

Items of compensation recognized for Retirement System purposes include: base salary, longevity pay, pay in lieu of holiday and/or vacation time for the current year, lump sum vacation payoff at retirement up to 100 hours maximum, and residency bonus. Items of compensation not recognized for retirement purposes are overtime pay, expense allowances, and lump sum payments at retirement in consideration of unused sick leave.

Blended Plan Members Definition

Blended Plan members include employees hired after October 7, 2022 (May 17, 2023 for Management employees).

Equity Securities	100,749,515		
Other Investments	5,775,573		
Collateral for securities lending	152,070		
Payable - Securities lending	(152,070)		
Payable - Due to Brokers and Liab.	0		
Payable - Due to Primary Gov.	0		
Total Current Assets	\$127,949,018	Total Reserves	\$127,949,018

* These reserve amounts were not supplied by the City. We have set the Employees' Contributions Reserve to the sum of the employee contributions submitted for each individual in the valuation. The Retired Benefit Payments Reserve has been set equal to the liability for retired members to the extent possible. The Employer Contribution Reserve is a balancing item to allow the sum of the three reserves to equal the market value of assets submitted for the valuation.

Revenues and Expenditures

	Total
Market Value - July 1, 2023	\$120,381,684
Revenues	
Employee contributions	2,132,563
Employer contributions	5,746,805

Net investment income	12,911,032
Total	20,790,400
Expenditures	
Benefit payments (pension only) & Refund of member contributions	13,103,811
Other	0
Administrative expenses	119,255
Total	13,223,066
Market Value - June 30, 2024	\$127,949,018

Development of Funding Value of System Assets (Valuation Assets) June 30, 2024

Year Ended June 30:	2024	2025	2026	2027	2028
A. Funding Value Beginning of Year	\$ 118,806,575				
B. Market Value End of Year	127,949,018				
C. Market Value Beginning of Year	120,381,684				
D. Non-Investment Net Cash Flow					
D1. Audit Adjustment (BOY)	0				
D2. Contributions less benefit payments and admin. expenses (MOY)	(5,343,698)				
E. Investment Income					
E1. Market Total: B - C - D1 - D2	12,911,032				
E2. Assumed Rate (i)	7.00%				
E3. Amount for Immediate Recognition: $i * (A + D1 + D2 / 2)$	8,129,431				
E4. Amount for Phased-In Recognition: E1 - E3	4,781,601				
F. Phased-In Recognition of Investment Income					
F1. Current Year: $0.20 \times E4$	956,320				
F2. First Prior Year	1,114,063	\$ 956,320			
F3. Second Prior Year	(3,637,501)	1,114,063	\$ 956,320		
F4. Third Prior Year	4,722,027	(3,637,501)	1,114,063	\$ 956,320	
F5. Fourth Prior Year	(1,412,693)	4,722,025	(3,637,500)	1,114,063	\$ 956,321
F6. Total Recognized Investment Gain	\$ 1,742,216	\$ 3,154,907	\$ (1,567,117)	\$ 2,070,383	\$ 956,321
G. Funding Value End of Year: A + D1 + D2 + E3 + F6	123,334,524				
H. Difference Between Market & Funding Value	4,614,494				
I. Recognized Rate of Return - Funding Value	8.50%				
J. Recognized Rate of Return - Market Value	10.97%				
K. Ratio of Funding to Market Value of Assets	96.39%				

The Funding Value of Assets recognizes assumed investment income (line E3) fully each year. Differences between actual and assumed investment income (line E4) are phased-in over a closed five-year period. During periods when investment performance exceeds the assumed rate, Funding Value of Assets will tend to be less than market value. During periods when investment performance is less than the assumed rate, Funding Value of Assets will be greater than market value. The Funding Value of Assets is **unbiased** with respect to Market Value. At any time it may be either greater or less than Market Value. If recognized and assumed rates of retirement income are exactly equal for four consecutive years, the Funding Value will become equal to Market Value.

SECTION C

SUMMARY OF VALUATION METHODS AND ASSUMPTIONS

Actuarial Cost Method

Normal cost and the allocation of benefit values between service rendered before and after the valuation date was determined using an individual entry-age actuarial cost method having the following characteristics:

- The annual normal cost for each individual active member, payable from the date of employment to the date of retirement, is sufficient to accumulate the value of the member's benefit at the time of retirement; and
- Each annual normal cost is a constant percentage of the member's year by year projected covered pay.

Financing of Unfunded Actuarial Accrued Liabilities. The Unfunded Actuarial Accrued Liability (UAAL) was determined using the funding value of assets and actuarial accrued liability calculated as of the valuation date. The UAAL amortization payment (one component of the contribution requirement), is the level percent of pay required to fully amortize the UAAL over a 19-year period beginning with the fiscal year beginning July 1, 2025. This UAAL payment reflects the payment expected to be made between the valuation date and the date contributions determined by this report are scheduled to begin. The UAAL contribution rate may be adjusted in cases where annual total payroll growth is less than the assumption of 2.75%.

Funding Value of Assets. The Funding Value of Assets used for funding purposes is derived as follows: prior year Funding Value of Assets are increased by contribution and expected investment income and reduced by refunds, benefit payments and expenses. To this amount is added 20% of the difference between the expected and actual investment income for each of the previous five years.

Actuarial Assumptions Used for the Valuation

The actuary calculates the contribution requirements and benefit values of the System by applying actuarial assumptions to the benefit provisions and member information furnished, using the actuarial cost method described on the previous page.

The principal areas of financial risk which require assumptions about future experience are:

- Long-term rates of investment return to be generated by the assets of the System;
- Patterns of pay increases to members;
- Rates of mortality among members, retirees and beneficiaries;
- Rates of withdrawal of active members (without entitlement to a retirement benefit);
- Rates of disability among members; and
- The age patterns of actual retirements.

In a valuation, the actuary calculates the monetary effect of each assumption for as long as a present covered person survives - - - a period of time which can be as long as a century.

Actual experience of the System will not coincide exactly with assumed experience, regardless of the accuracy of the assumptions, or the skill of the actuary and the precision of the many calculations made. Each valuation provides a complete recalculation of assumed future experience and takes into account all past differences between assumed and actual experience. The result is a continual series of adjustments (usually small) to the computed contribution rate.

From time-to-time, it becomes appropriate to modify one or more of the assumptions, to reflect experience trends (but not random year-to-year fluctuations). The assumptions are established by the Board after consulting with the actuary. New assumptions were adopted for the June 30, 2021 valuation pursuant to the Experience Study dated March 19, 2021, which contains the rationale for those assumptions. All actuarial assumptions are based on future expectations, not market measures.

The rate of investment return was 7.00% per year, compounded annually (net of investment expenses). This assumption is used to make money payable at one point in time equal in value to a different amount of money payable at another point in time. The assumed real rate of return (the net return in excess of the wage inflation rate) was 4.25%. No specific price inflation assumption is needed for this valuation; however, the economic assumptions are consistent with a price inflation of 2.25% per annum. Economic experience during the last five years is shown in the table below:

	Year Ending June 30					5-Year Average
	2024	2023	2022	2021	2020	
1) Nominal recognized rate	8.5%	7.0%	6.2%	10.8%	4.3%	7.4%
2) Increase in CPI	3.0	3.0	9.1	5.4	0.6	4.2
3) Average salary increase	8.9	7.5	3.8	2.8	3.6	5.3
4) Real return as measured by						
- CPI: (1)-(2)						3.2
- Wage inflation: (1)-(3)						2.1

The nominal rate of return was computed using the approximate formula: $i = I \text{ divided by } 1/2 (A+B-I)$, where I is recognized investment income net of expenses, A is the beginning of year asset value and B is the end of year asset value.

The rates of salary increase used for individual members are in accordance with the following table. This assumption is used to project a member's current salary to the salaries upon which benefit amounts will be based.

Salary Increase Assumptions for an Individual Member			
Sample Ages	Merit & Seniority	Base (Economic)	Increase Next Year
20	3.00%	2.75%	5.75%
25	2.25	2.75	5.00
30	1.13	2.75	3.88
35	0.73	2.75	3.48
40	0.38	2.75	3.13
45	0.38	2.75	3.13
50	0.25	2.75	3.00
55	0.25	2.75	3.00
60	0.00	2.75	2.75
65	0.00	2.75	2.75

If the number of active members remains constant, then the total active member payroll is expected to increase 2.75% annually, the base portion of the individual salary increase assumptions.

Mortality. This assumption is used to measure the probabilities of members dying before retirement and the probabilities of each benefit payment being made after retirement. The tables used are as follows:

- **Healthy Pre-Retirement:** PubG-2010 Employee Male and Female Mortality Tables, projected with mortality improvements using the fully generational MP-2020 projection scale from a base year of 2010.
- **Healthy Post-Retirement:** PubG-2010 Retiree Male and Female Mortality Tables, projected with mortality improvements using the fully generational MP-2020 projection scale from a base year of 2010.
- **Disability Retirement:** PubNS-2010 Disabled Retiree Male and Female Mortality Tables, projected with mortality improvements using the fully generational MP-2020 projection scale from a base year of 2010.

Sample Attained Ages	Healthy Pre-Retirement		Healthy Post-Retirement		Disabled Retirement	
	Future Life Expectancy (Years)		Future Life Expectancy (Years)		Future Life Expectancy (Years)	
	Men	Women	Men	Women	Men	Women
55	34.15	36.18	30.67	33.45	22.86	25.60
60	29.25	31.15	25.94	28.59	19.67	22.30
65	24.47	26.22	21.43	23.85	16.71	19.01
70	19.82	21.38	17.15	19.31	13.87	15.62
75	15.27	16.67	13.22	15.07	11.10	12.34
80	10.86	12.12	9.74	11.25	8.53	9.40

Applicable to calendar year 2024. Life expectancies in future years are determined by the fully generational MP-2020 projection scale.

Additional margin for future mortality improvements are included in the projection scale.

These rates were first used for the June 30, 2021 valuation.

The rates of retirement used to measure the probability of eligible members retiring during the next year were as follows:

Retirement Ages	Percents of Active Members Retiring Within Next Year				
	Normal Retirement		Early Retirement		Rule of 82
	Tiers I and II	Blended Plan	Tiers I and II	Blended Plan	
50					20%
51					20
52					20
53					20
54					20
55					20
56					20
57	20%	15%	5.0%	3.5%	20
58	20	15	5.0	3.5	20
59	20	15	10.0	3.5	30
60	20	15	5.0	3.5	30
61	20	15	5.0	3.5	30
62	35	25	15.0	10.0	30
63	15	15	15.0	10.0	30
64	15	15	25.0	15.0	30
65	15	15	100.0	100.0	30
66	40	25			30
67	40	30			30
68	40	30			30
69	40	30			30
70	100	100			100

Tier I members: Assumed to be eligible for normal retirement when the sum of their age and service is at least 82, or age 65 with 5 or more years of service. A member was assumed to be eligible for early retirement after attaining age 57 with 20 or more years of service or age 60 with 10 or more years of service.

Tier II and Blended Plan members: Assumed to be eligible for normal retirement at age 57 with 25 or more years of service, age 62 with 20 or more years of service, or age 65 with 10 or more years of service. A member was assumed to be eligible for early retirement after attaining age 57 with 20 or more years of service or age 60 with 10 or more years of service.

Rates of separation from active membership were as shown below (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members remaining in employment.

Sample Ages	Years of Service	% of Active Separating
ALL	0	16.00%
	1	12.00
	2	9.00
	3	8.00
	4	6.00
	5	5.50
	6	5.00
	7	4.00
	8	3.50
	9	3.50
	10 & Over	
20		12.60
25		12.60
30		7.63
35		6.44
40		4.13
45		2.03
50		1.33
55		1.33
60		1.33
65		1.33

Rates of disability were as follows:

Sample Ages	% of Active Members Becoming Disabled
20	0.10%
25	0.10
30	0.10
35	0.10
40	0.36
45	0.41
50	0.57
55	0.77
60	1.02
65	1.23

Miscellaneous and Technical Assumptions

Administrative Expense Load:	A load based on the prior year's administrative expenses as a percent of payroll contribution made by the City to fund administrative expenses.
Benefit Service:	Exact fractional service as of the valuation date is used to determine the amount of benefit payable.
Data Adjustments:	Annual pay provided by the City for valuation purposes was set equal to prior year valuation pay for records known to be on leave of absence, records with large unexplained pay decreases, and records with pay increases due to sick bonuses.
Decrement Operation:	Disability and withdrawal decrements do not operate after member reaches retirement eligibility. All decrements operate during the first 10 years of service.
Decrement Relativity:	Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
Decrement Timing:	Decrements of all types are assumed to occur mid-year.
Eligibility Testing:	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
Incidence of Contributions:	Contributions are assumed to be received continuously throughout the year based upon the computed percent-of-payroll shown in this report, and the actual payroll payable at the time contributions are made.
Marriage Assumption:	100% of members are assumed to be married for purposes of valuing death-in-service benefits.
Miscellaneous Adjustment Factors:	A load of 1.0% is used to approximate the value of the lump sum vacation payoff for the Tier II and Blended Plan members. For Tier I members, a 4.0% load is used. A 1.3% load is included on deferred member liabilities for the subsidized 50% joint-and-survivor annuity option for married participants.
Pay Increase Timing:	Beginning of the fiscal year.
Service Credit Accruals:	It is assumed that members accrue one year of service credit per year.

SECTION D

OPERATION OF THE RETIREMENT SYSTEM

Basic Financial Objective and Operation of the Retirement System

Benefit Promises Made Which Must Be Paid For. A retirement program is an orderly means of handing out, keeping track of, and financing contingent pension promises to a group of employees. As each member of the retirement program acquires a unit of service credit they are, in effect, handed an "IOU" which reads: "The Employees Retirement System promises to pay you one unit of retirement benefits, payments in cash commencing when you retire."

The principal related financial question is: When shall the money required to cover the "IOU" be contributed? This year, when the benefit of the member's service is received? Or, some future year when the "IOU" becomes a cash demand?

The Constitution of the State of Michigan is directed to the question:

"Financial benefits arising on account of service rendered in each fiscal year shall be funded during that year and such funding shall not be used for financing unfunded accrued liabilities."

This Retirement System meets this constitutional requirement by having the following **Financial Objective: To establish and receive contributions, expressed as percents of active member payroll, which will remain approximately level** from year-to-year and will not have to be increased for future generations of taxpayers.

Translated into actuarial terminology, a level percent-of-payroll contribution objective means that the contribution rate must be at least:

Normal Cost (the current value of benefits likely to be paid on account of members' service being rendered in the current year)

. . . plus . . .

Interest on the Unfunded Actuarial Accrued Liability (the difference between the actuarial accrued liability and current System assets).

If contributions to the retirement program are less than the preceding amount, the difference, **plus investment earnings not realized thereon**, will have to be contributed at some later time, or, benefits will have to be reduced, to satisfy the fundamental fiscal equation under which all retirement programs must operate; that is:

$$B = C + I - E$$

Benefit payments to any group of members and their beneficiaries cannot exceed the sum of:

Contributions received on behalf of the group

... plus ...

Ivestment earnings on plan assets

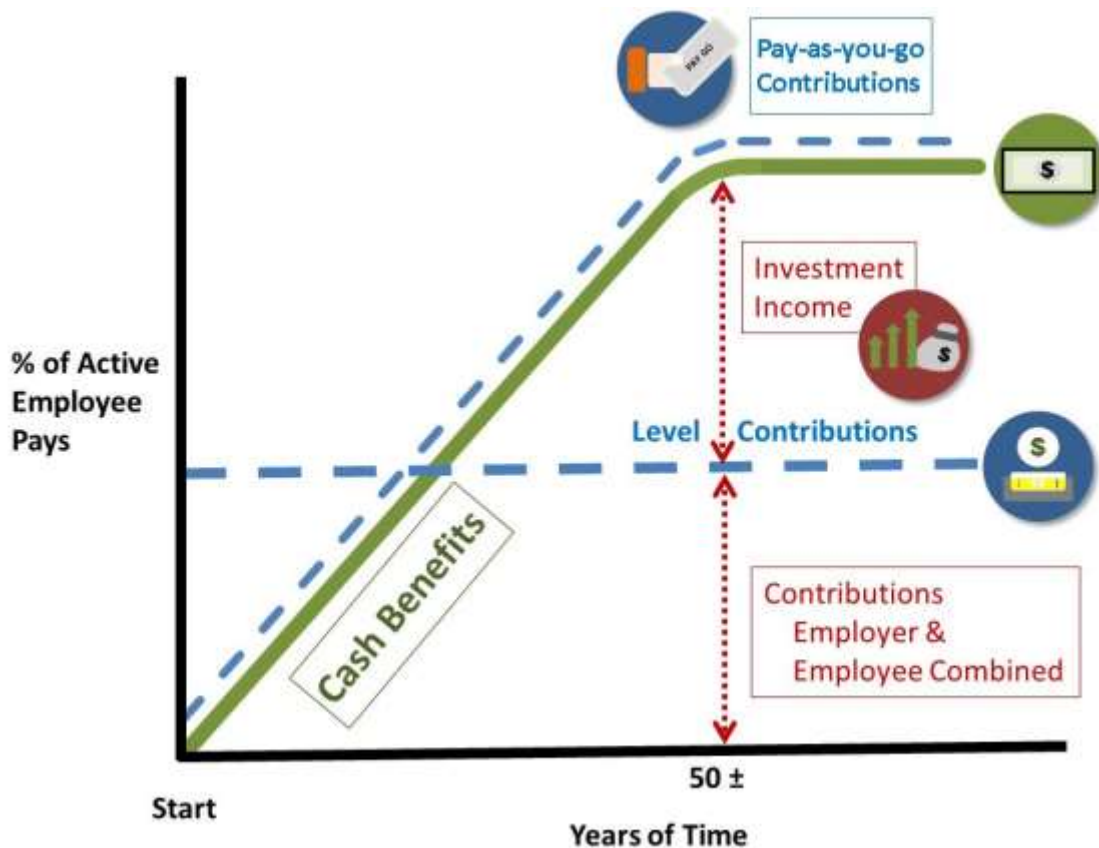

... minus ...

Expenses incurred in operating the program.

There are retirement programs designed to defer the bulk of contributions far into the future. Lured by artificially low present contributions, the inevitable consequence of a relentlessly increasing contribution rate -- to a level which may be greatly in excess of the level percent-of-payroll rate -- is ignored. ***This method of financing is prohibited in Michigan by the State Constitution.***

A by-product of a level percent-of-payroll contribution objective is the accumulation of invested assets for varying periods of time. Invested assets are a by-product of level percent-of-payroll contributions, not the objective. Investment income becomes the third and largest contributor to the retirement program, and the amount is directly related to the amount of contributions and investment performance.

Computed Contribution Rate Needed To Finance Benefits. From a given schedule of benefits and from the data furnished, the actuary calculates the contribution rate ***by means of an actuarial valuation*** - the technique of assigning monetary values to the risks assumed in operating a retirement program.

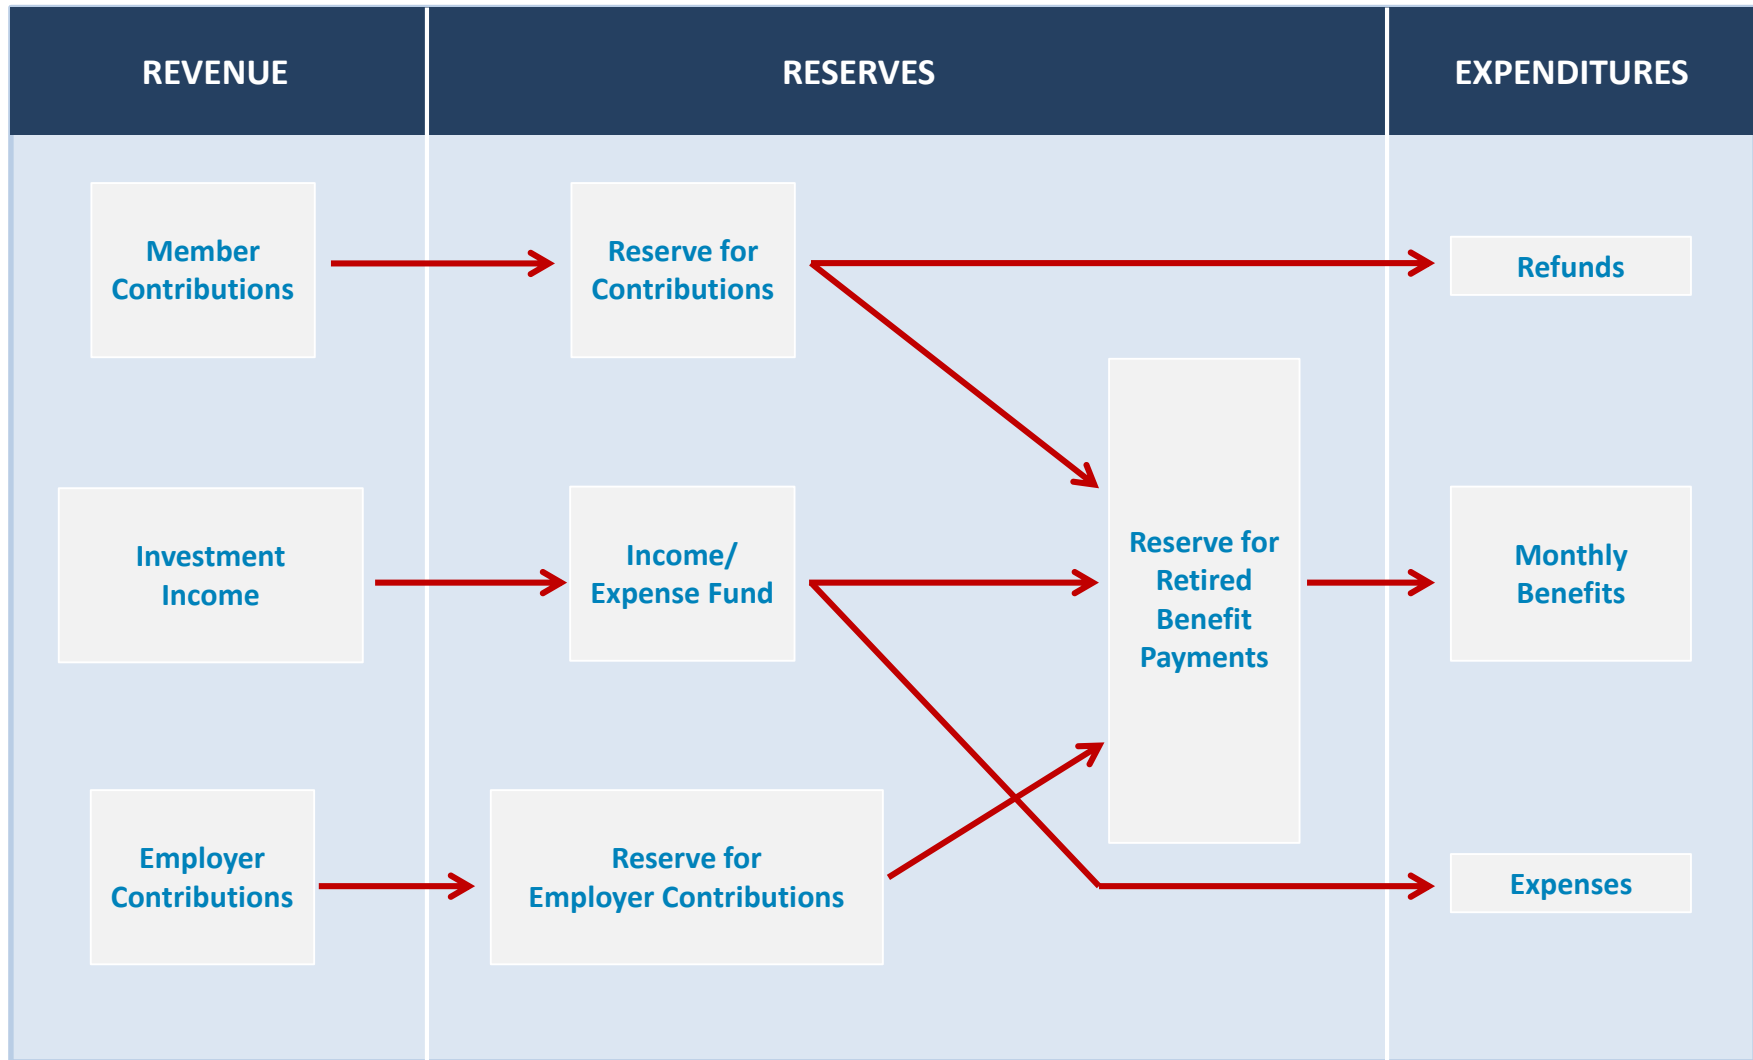

CASH BENEFITS LINE. This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

LEVEL CONTRIBUTION LINE. Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

- **Economic Risk Areas**
 - Rates of investment return
 - Rates of pay increase
 - Changes in active member group size
- **Non-Economic Risk Areas**
 - Ages at actual retirement
 - Rates of mortality
 - Rates of withdrawal of active members (turnover)
 - Rates of disability

Flow of Money Through the Retirement System

Glossary

Actuarial Accrued Liability - The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as “accrued liability” or “past service liability.”

Accrued Service - The service credited under the plan which was rendered before the date of the actuarial valuation.

Actuarial Assumptions - Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.

Actuarial Cost Method - A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future plan benefits” between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the “actuarial funding method.”

Actuarial Equivalent - A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.

Actuarial Present Value - The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

Amortization - Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.

Experience Gain (Loss) - A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

Normal Cost - The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as “current service cost.” Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

Plan Termination Liability - The actuarial present value of future plan benefits based on the assumption that there will be no further accruals for future service and salary. The termination liability will generally be less than the liabilities computed on a “going-concern” basis and is not normally determined in a routine actuarial valuation.

Reserve Account - An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

Glossary

Unfunded Actuarial Accrued Liability - The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as “unfunded accrued liability.”

Valuation Assets - The value of current plan assets recognized for valuation purposes. Generally based on book value plus a portion of unrealized appreciation or depreciation.

APPENDIX 1

ACTUARIAL FUNDING POLICY

City of Southfield Employees Retirement System

Actuarial Funding Policy

Adopted: September 23, 2014

WHEREAS, the City of Southfield Employees Retirement System (“Retirement System”) is established and administered pursuant to Title I, Chapter 9 of the City of Southfield Code of Ordinances, as amended, applicable collective bargaining agreements, and applicable state and federal laws including, but not limited to Public Act 314 of 1965, as amended (“Act 314”) [MCL 38.1132 *et seq.*], and

WHEREAS, the Board of Trustees of the Retirement System (“Board”) is vested with the authority and fiduciary responsibility for the proper administration and operation of the Retirement System, and

WHEREAS, the Board, in consultation with its Actuary, has an obligation to establish the economic and demographic assumptions to be utilized in performing the required actuarial valuation of the Retirement System and in determining the required annual employer contribution to the Retirement System, and

WHEREAS, the Board is aware of upcoming changes to the accounting and reporting standards approved by the Governmental Accounting Standards Board (GASB) for public pension plans, and

WHEREAS, the Board wishes to establish a formal Actuarial Funding Policy addressing the funding objectives and actuarial assumptions to be utilized in determining the funding status of the Retirement System, therefore be it

RESOLVED, that the Board hereby adopts the following Actuarial Funding Policy:

I. GENERAL

A. Purpose

In light of upcoming changes to the GASB financial accounting and reporting standards for public pension plans, the Board of Trustees of the Retirement System desires to establish a formal Actuarial Funding Policy to ensure the systematic funding of future pension obligations of the Retirement System.

B. Policy Objectives

- (1) Maintain adequate levels of assets sufficient to fund all benefits expected to be paid to members and beneficiaries when due.
- (2) Maintain stability of employer contributions rates, consistent with other funding objectives.
- (3) Support the public policy goals of accountability and transparency.
- (4) Monitor material risks to assist in any risk management strategies the Board deems appropriate.
- (5) Promote intergenerational equity. Each generation of members and employers should incur the cost of benefits for the employees who provide services to them, rather than deferring costs to future members and employers.

- (6) Provide a reasonable margin for adverse experience to offset risk.
- (7) Review the Plan's investment return assumption, potentially in conjunction with a periodic asset liability study and in consideration of the Board's risk profile.
- (8) Continue the systematic reduction of the Plan's Unfunded Actuarial Accrued Liabilities (UAAL).

II. LEGAL

A. Annual Actuarial Valuation

Section 20h(4) of Act 314 [MCL 38.1140h(4)], requires the Retirement System to have an actuarial valuation performed annually as follows:

Except as otherwise provided in this subsection, a system shall have an annual actuarial valuation with assets valued on a market-related basis. The actuarial present value of total projected benefits shall include all pension benefits to be provided by the system to members or beneficiaries pursuant to the terms of the system and any additional statutory or contractual agreements to provide pension benefits through the system that are in force at the actuarial valuation date, including, but not limited to, service credits purchased by members, deferred retirement option plans, early retirement programs, and postretirement adjustment programs. A system that has less than \$20,000,000.00 is only required to have an actuarial valuation as required under this subsection done every other year.

B. Annual Employer Contribution

The Board is required, pursuant to Section 20m of Act 314 [MCL 38.1140m], to annually certify the annual required contribution to be made by the employer as follows:

The governing board vested with the general administration, management, and operation of a system or other decision-making body that is responsible for implementation and supervision of any system shall confirm in the annual actuarial valuation required under section 20h and the summary annual report required under section 13 that each system under this act provides for the payment of the required employer contribution as provided in this section and shall confirm in the summary annual report that the system has received the required employer contribution for the year covered in the summary annual report. The required employer contribution is the actuarially determined contribution amount. An annual required employer contribution in a system under this act shall consist of a current service cost payment and a payment of at least the annual accrued amortized interest on any unfunded actuarial liability and the payment of the annual accrued amortized portion of the unfunded principal liability. For fiscal years that begin before January 1, 2006, the required employer contribution shall not be determined using an amortization period greater than 40 years. Except as otherwise provided in this section, for fiscal years that begin after December 31, 2005, the required employer contribution shall not be determined using an amortization period greater than 30 years. In a plan year, any current service cost payment may be offset by a credit for amortization of accrued assets, if any, in

excess of actuarial accrued liability. A required employer contribution for a system administered under this act shall allocate the actuarial present value of future plan benefits between the current service costs to be paid in the future and the actuarial accrued liability. The governing board vested with the general administration, management, and operation of a system or other decision-making body that is responsible for implementation and supervision of a system shall act upon the recommendation of an actuary and the board and the actuary shall take into account the standards of practice of the actuarial standards board of the American academy of actuaries in making the determination of the required employer contribution.

III. POLICY

A. Actuarial Cost Method

- (1) The individual entry age actuarial cost method of valuation shall be utilized in determining actuarial accrued liability and normal cost with the following characteristics:
 - (a) the annual normal costs for each individual active member, payable from the date of employment to the date of retirement, are sufficient to accumulate the value of the member's benefit at the time of retirement; and
 - (b) each annual normal cost is a constant percentage of the member's year by year projected covered pay; and
 - (c) the normal cost is based upon the benefit provisions applicable for employees hired on or after June 1, 2005 (February 2, 2009 for PST and March 2, 2009 for PSS).
- (2) Differences in the past between assumed experience and actual experience (actuarial gains and losses) shall be factored into the actuarial accrued liability.
- (3) The normal cost shall be determined on an individual basis for each active member.

B. Asset Smoothing Method

The investment gains or losses of each valuation period, resulting from the difference between actual investment return and assumed investment return, shall be recognized annually in level amounts over a period not to exceed five (5) years in calculating the funding value of assets.

C. Amortization Method

- (1) A level percent of payroll amortization method shall be used to systematically pay off the unfunded actuarial accrued liabilities over a closed amortization period not to exceed 30 years.
- (2) Unfunded liabilities associated with benefit changes or assumption changes shall be funded over a period determined by the Board in consultation with its actuary.
- (3) Unfunded liabilities arising from benefit changes provided to retirees or in conjunction with early retirement incentive programs offered by the employer shall be separately funded over a period determined by the Board in consultation with its actuary.

D. Assumptions

The economic and demographic actuarial assumptions utilized to determine the contribution requirements and benefit values of the Retirement System shall be determined by the Board in consultation with its actuary and its investment consultant with respect to its economic assumptions.

E. Funding Target

- (1) The targeted funded ratio of the Retirement System shall be 100%.
- (2) The employer contribution rate shall at least be equal to the normal cost unless the funded ratio of the Retirement System exceeds 120%.
- (3) A funding plan shall be developed by the Board in consultation with its actuary if the funded ratio of the Retirement System falls below 50%, which may include additional funding requirements.

F. Risk Management

- (1) Assumption Changes
 - (a) The actuarial assumptions utilized to determine the annual contribution requirements and valuations shall be those last adopted by the Board based on the most recent experience study and upon the advice and recommendation of the Board's actuary. The Board's actuary shall conduct an experience study once every five years unless the Board, due to unique circumstances, elects to have such a study performed at an earlier or later date. The results of the experience study shall be the basis for the actuarial assumptions recommended to the Board.
 - (b) The actuarial assumptions may be revised during the five-year period between experience studies if significant plan design changes or other significant economic events occur, as advised by the actuary.
- (2) Risk Measures. The following risk measures will be annually determined to provide quantifiable measurements of risk as it applies to the Retirement System.
 - (a) Funded ratio;
 - (b) Unfunded actuarial accrued liabilities – the years required to pay down the unfunded liabilities of the Retirement System based upon the current funding schedule;
 - (c) Total unfunded actuarial accrued liabilities as a percentage of total payroll;
 - (d) Total assets as a percentage of total payroll; and
 - (e) Total actuarial accrued liabilities as a percentage of total payroll.
- (3) Risk Control
 - (a) The Board shall carefully monitor the risk measures identified above and shall consider steps to mitigate risk, particularly as the funded ratio increases.

IV. REVIEW AND AMENDMENT

A. Periodic Review

This Actuarial Funding Policy shall be reviewed no less frequently than once every five years in conjunction with the required experience study performed by the Board's actuary, and may be reviewed at any time in the Board's discretion.

B. Amendment

The Board, in consultation with its Actuary and Legal Counsel, may amend this Actuary Funding Policy at any time as deemed necessary to address changes in the makeup, benefit structure and/or funding status of the Retirement System.

APPENDIX 2

RISK MEASURES

Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	2024	2023	2022	2021	2020
Ratio of actives to retirees and beneficiaries	0.79	0.75	0.76	0.80	0.84
Ratio of retiree actuarial accrued liability to total liability	68%	70%	70%	68%	68%
Ratio of net cash flow to market value of assets	-4%	-5%	-6%	-5%	-6%

RATIO OF ACTIVES TO RETIREES AND BENEFICIARIES

A young plan with many active members and few retirees will have a high ratio of actives to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

RATIO OF RETIREE ACTUARIAL ACCRUED LIABILITY TO TOTAL LIABILITY

The ratio of retiree liability to the total actuarial accrued liability gives an indication of the maturity of the plan. As the ratio increases, cash flow needs increase, and the liquidity needs of the portfolio change. A ratio on the order of 50% indicates a maturing system. In the case of a closed plan, this ratio will eventually reach 100%.

RATIO OF NET CASH FLOW TO MARKET VALUE OF ASSETS

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

ADDITIONAL RISK ASSESSMENT

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

Risk Measures

Actuarial Valuation Date	(1) Actuarial Value of Assets	(2) Actuarial Accrued Liability (AAL) Entry Age	(3) Unfunded AAL (UAAL) (2) - (1)	(4) Covered Payroll	(5) Funded Ratio (1) / (2)	(6) Assets / Payroll (1) / (4)	(7) Liability / Payroll (2) / (4)	(8) Unfunded / Payroll (3) / (4)

6/30/2023 ^(a)	118,806,575	180,113,387	61,306,812	17,953,440	66.0	661.7	1,003.2	341.5
6/30/2024	123,334,524	185,317,097	61,982,573	20,675,626	66.6	596.5	896.3	299.8

(a) Revised actuarial assumptions, methods, and/or benefit changes. Beginning with 2016, the AAL displayed is based on each member's individual benefit structure.

(5) The Funded Ratio is the most widely known measure of a retirement system's financial strength, but the trend in the funded ratio is much more important than the absolute ratio. The funded ratio should trend to 100%. As it approaches 100%, it is important to re-evaluate the level of investment risk in the portfolio and potentially to re-evaluate the assumed rate of return.

(6) and (7) The ratios of assets and liabilities to payroll give an indication of both maturity and volatility. Many systems have ratios between 500% and 700%. Ratios significantly above that range may indicate difficulty in supporting the benefit level as a level % of pay. For systems that are closed to new hires, it is expected that these ratios will grow as payroll declines.

(8) The ratio of the unfunded liability to payroll gives an indication of the retirement system sponsor's ability to actually pay off the unfunded liability. A ratio above approximately 300% or 400% may indicate difficulty in discharging the unfunded liability within a reasonable time frame.

Low-Default-Risk Obligation Measure

Introduction

In December 2021, the Actuarial Standards Board (ASB) adopted a revision to Actuarial Standard of Practice (ASOP) No. 4, *Measuring Pension Obligations and Determining Pension Plan Costs or Contributions*. The revised ASOP No. 4 requires the calculation and disclosure of a liability referred to by the ASOP as the “Low-Default-Risk Obligation Measure” (LDROM). The rationale that the ASB cited for the calculation and disclosure of the LDROM was included in the Transmittal Memorandum of ASOP No. 4 and is presented below (emphasis added):

“The ASB believes that the calculation and disclosure of this measure provides **appropriate, useful information for the intended user regarding the funded status of a pension plan**. The calculation and disclosure of this additional measure is **not intended to suggest that this is the “right” liability measure** for a pension plan. However, the ASB does believe that **this additional disclosure provides a more complete assessment of a plan’s funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date.**”

Comparing the Accrued Liabilities and the LDROM

One of the fundamental financial objectives of the City of Southfield Employees Retirement System is to finance each member’s retirement benefits over the period from the member’s date of hire until the member’s projected date of retirement (entry age actuarial cost method) as a level percentage of payroll. To fulfill this objective, the discount rate that is used to value the accrued liabilities of the System is set equal to the **expected return** on the System’s diversified portfolio of assets (referred to sometimes as the investment return assumption). For the System, the investment return assumption is 7.00%.

The LDROM is meant to approximately represent the lump sum cost to a plan to purchase low-default-risk fixed income securities whose resulting cash flows essentially replicate in timing and amount the benefits earned (or the costs accrued) as of the measurement date. The LDROM is very dependent upon market interest rates at the time of the LDROM measurement. The lower the market interest rates, the higher the LDROM, and vice versa. The LDROM results presented in this report are based on the entry age actuarial cost method and discount rates based upon the June 2024 Treasury Yield Curve Spot Rates (end of month). The 1-, 5-, 10- and 30-year rates follow: 5.12%, 4.34%, 4.22% and 4.45%. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan’s benefit obligation.

The difference between the two measures (Valuation and LDROM) is one illustration of the savings the sponsor anticipates by taking on risk in a diversified portfolio.

Accrued Liabilities and LDROM

Valuation Accrued Liabilities	LDROM
\$185,317,097	\$242,526,284
