Retirement Board  
City of Southfield  
Fire and Police Retirement System  
Southfield, Michigan

Dear Board Members:

The results of the **June 30, 2024** Annual Actuarial Valuation of the City of Southfield Fire and Police Retirement System are presented in this report.

This report was prepared at the request of the Board and is intended for use by the Retirement System and those designated or approved by the Board. This report may be provided to parties other than the Retirement System only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The purpose of the valuation is to measure the System's funding progress and to determine the employer contribution rate for the fiscal year beginning July 1, 2025. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results, associated with the benefits described in this report, for purposes other than those identified above may be significantly different. Information required by GASB Statement Nos. 67 and 68 are provided in a separate report.

The findings in this report are based on data and other information through June 30, 2024. The valuation was based upon information furnished by the City, concerning Retirement System benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by the City.

This valuation assumes the continuing ability of the participating employer to make the contributions necessary to fund this system. A determination regarding whether or not the participating employer is actually able to do so is outside our scope of expertise. Consequently, we did not perform such an analysis.

This report includes risk metrics in Appendix 3, but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of the assignment.

This report was prepared using assumptions adopted by the Board. All actuarial assumptions used in this report are reasonable for the purposes of this valuation. The combined effect of the assumptions, excluding prescribed assumptions or methods set by law, is expected to have no significant bias (i.e., not significantly optimistic or pessimistic). Additional information about the actuarial assumptions is included in Section C of this report.

We have assessed that the contribution rate calculated under the current funding policy is a reasonable Actuarially Determined Employer Contribution (ADEC) and it is consistent with the plan accumulating adequate assets to make benefit payments when due.

This report was prepared using our proprietary valuation model and related software which, in our professional judgment, has the capability to provide results that are consistent with the purposes of the valuation and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

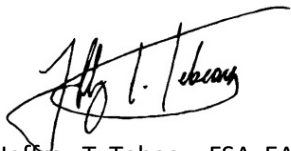

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge, the information contained in this report is accurate and fairly presents the actuarial position of the City of Southfield Fire and Police Retirement System as of the valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices, with the Actuarial Standards of Practice issued by the Actuarial Standards Board and with applicable statutes.

Jeffrey T. Tebeau and Casey T. Ahlbrandt-Rains are Members of the American Academy of Actuaries (MAAA) and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein.

The signing actuaries are independent of the plan sponsor.

Gabriel, Roeder, Smith & Company will be pleased to review this valuation and report with the Board of Trustees and to answer any questions pertaining to the valuation.

Respectfully submitted,  
Gabriel, Roeder, Smith & Company

Jeffrey T. Tebeau, FSA, EA, FCA, MAAA

Casey T. Ahlbrandt-Rains, ASA, FCA, MAAA

## **SECTION A**

---

### **VALUATION RESULTS**

## Funding Objective

*The funding objective of the Retirement System is to establish and receive contributions, expressed as a percent of active member payroll, which will remain approximately level from year-to-year and will accumulate sufficient assets during each member's period of active service to finance benefits payable throughout retirement.*

## Contribution Rates

The Retirement System is supported by member contributions, City contributions and investment income from Retirement System assets.

Contributions which satisfy the funding objective are determined by the annual actuarial valuation and are sufficient to:

- (1) Cover the actuarial present value of benefits allocated to the current year by the actuarial cost method described in Section C (the normal cost); and
- (2) Finance over a period of future years the actuarial present value of benefits not covered by valuation assets and anticipated future normal costs (unfunded actuarial accrued liability).

**Computed contribution rates** for the fiscal year beginning July 1, 2025 are shown on page A-2.

The Board of Trustees of the City of Southfield Fire and Police Retirement System confirms that the System provides for payment of the required employer contribution as described in Section 20m of the Michigan Public Act No. 728.

# Contributions to Provide Benefits Fiscal Year Beginning July 1, 2025

Contributions for	Contributions Expressed as %'s of Active Member Payroll
<i>Normal Cost of Benefits:</i>	
Age & service	19.57%
Disability	1.39
Death before retirement	0.25
Refunds of member contributions	0.21
Expenses	0.71
Total	22.13
<i>Member Contributions (weighted avg.)</i>	5.68
<i>Employer Normal Cost</i>	16.45
<i>Unfunded Actuarial Accrued Liabilities*</i>	28.00
<b>Computed Employer Rate</b>	<b>44.45%</b>
Minimum Dollar Contribution	\$11,101,262

\* *Unfunded Actuarial Accrued Liabilities were amortized as a level percent-of-payroll over a closed period of 22 years (starting period of 30 years). Includes the effects of the lag between the valuation date and the contribution period.*

## Determining Employer Dollar Contributions

For any period of time, the percent-of-payroll contribution rate needs to be converted to dollars and then contributed to the Retirement System. The established procedure is to contribute bi-weekly, as follows:

- (a) Bi-weekly covered payroll for all active members.
- (b) Employer contribution rate.
- (c) Gross contribution dollars: (a) x (b).

The projected employer dollar contribution based on the payroll information provided for the valuation, adjusted to reflect assumed payroll increases between the valuation date and the fiscal year for which the contributions are being determined, is \$11,101,262. **Therefore, we suggest a minimum contribution of this amount. Please see the comment on page A-11 for additional discussion of amortization of unfunded liabilities.**

## Valuation Assets and Unfunded Actuarial Accrued Liability

*In financing the actuarial accrued liabilities*, the assets of \$201,558,565 (including the reserve for inflation equity) were distributed as shown below. Please see pages B-13 and B-14 for information concerning the development of valuation assets.

Reserves for	Present Valuation Assets Applied to			Totals
	Member Accrued Liabilities	Retired Life Liabilities	Contingency Reserve	
Employees' Contributions	\$ 8,245,943	\$ 0	\$ 0	\$ 8,245,943
Employer Contributions	0	(24,753,391)	0	(24,753,391)
Retired Benefit Payments	<u>0</u>	<u>218,066,012</u>	<u>0</u>	<u>218,066,013</u>
Funding Value of Assets	\$ 8,245,943	\$ 193,312,621	\$ 0	\$ 201,558,565
Reserves for Inflation Equity				<u>0</u>
Grand Total				\$ 201,558,565

The Funding Value of Assets (which exclude the reserve for inflation equity) were applied against actuarial accrued liabilities in determining Unfunded Actuarial Accrued Liabilities as follows:

	Retired Lives	Active Members*	Totals
Computed Actuarial Accrued Liabilities	\$ 218,066,013	\$ 86,564,798	\$ 304,630,811
Funding Value of Assets	<u>193,312,621</u>	<u>8,245,944</u>	<u>201,558,565</u>
Unfunded Actuarial Accrued Liabilities	\$ 24,753,391	\$ 78,318,854	\$ 103,072,246

\* Includes terminated members who are vested.

## Derivation of Experience Gain (Loss) Year Ended June 30, 2024

Actual experience will never (except by coincidence) coincide exactly with assumed experience. It is hoped that gains and losses will cancel each other over a period of years, but sizable year-to-year fluctuations are common. Detail on the derivation of the experience gain (loss) is shown below, along with a year-by-year comparative schedule.

(1) UAAL* at start of year		\$ 99,665,071
(2) Total normal cost from last valuation		5,320,181
(3) Actual employer and employee contributions		13,139,450
(4) Interest Accrual: $[(1) + ((2) - (3)) / 2] \times 6.75\%$		6,463,492
(5) Expected UAAL before changes: (1) + (2) - (3) + (4)		98,309,294
(6) Change due to benefit changes		0
(7) Change due to revised actuarial assumptions / methods		0
(8) Expected UAAL after changes: (5) + (6) + (7)		98,309,294
(9) Actual UAAL at end of year		103,072,246
(10) Gain (Loss): (8) - (9)		\$ (4,762,952)
(11) Gain (Loss) as percent of actuarial accrued liabilities at start of year (\$298,021,784)		(1.6)%

\* *Unfunded Actuarial Accrued Liabilities.*

### Gains/Losses - Past 10 Years

# Summary Statement of System Resources and Obligations

## Pension Only as of June 30, 2024

### Present Resources and Expected Future Resources

---

A.	<i>Present valuation assets:</i>	
	1. Market value of assets	\$ 199,716,531
	2. Reserve for inflation equity	0
	3. Actuarial adjustment	<u>1,842,034</u>
	4. Actuarial value of assets	201,558,565
B.	<i>Actuarial present value of expected future contributions:</i>	
	1. For normal costs	50,307,064
	2. For unfunded actuarial accrued liability	<u>103,072,246</u>
	3. Total	153,379,310
C.	<b>Total Present and Expected Future Resources</b>	<u><u>\$ 354,937,875</u></u>

### Actuarial Present Value of Expected Future Benefit Payments

---

A.	<i>To retirees and beneficiaries:</i>	
	1. Current benefits	\$ 218,066,013
	2. Reserve for inflation equity	<u>-</u>
	3. Total	218,066,013
B.	<i>To vested terminated members</i>	838,576
C.	<i>To present active members:</i>	
	1. Allocated to service rendered prior to valuation date - actuarial accrued liability	85,726,222
	2. Allocated to service likely to be rendered after valuation date	<u>50,307,064</u>
	3. Total	136,033,286
D.	<b>Total Actuarial Present Value of Expected Future Benefit Payments</b>	<u><u>\$ 354,937,875</u></u>

2024	304.6	201.6	103.0	66.2	435.7
2024 #	304.6	201.6	103.0	66.2	435.7

\* Revised actuarial assumptions or methods.

# Retirement System amended.

**The Ratio of Valuation Assets to AAL** is a traditional measure of a system's funding progress. Except in years when the system is amended or actuarial assumptions are revised, this ratio can be expected to gradually trend toward 100%.

**The Ratio of UAAL to Valuation Payroll** is another relative index of condition. Unfunded actuarial accrued liabilities represent debt, while active member payroll represents the System's capacity to collect contributions to pay toward debt. The lower the ratio, the greater the financial strength and vice-versa.

# Assets and Unfunded Liability

## Active and Retired Members

## Benefits Paid and Employer Contribution Rates as a Percent of Payroll

# Comments

## Funded Status

The Retirement System is 66.2% funded based on the Funding Value of assets and 65.6% funded based on the Market Value of assets. The ratio has decreased on a Funding Value of assets basis and increased on a Market Value of assets basis since the 2023 valuation.

## Retirement System Experience

Overall, fund experience was less favorable than assumed during the year ending June 30, 2024, producing an experience loss of approximately \$4.8 million. The total experience loss is made up of a loss on investment experience of \$0.9 million and a liability experience loss of \$3.9 million. The liability experience loss is attributable to larger than assumed individual pay increases and more retirements than expected, offset somewhat by more active terminations than assumed.

The market value rate of return was 8.01% for the fiscal year ended June 30, 2024, for the pension only fund value (excluding assets attributable to the Reserve for Inflation Equity (RIE)). The valuation process employs a smoothing mechanism which recognizes investment gains and losses over a five-year period. Therefore, 20% of this year's loss is recognized in this year's funding value of assets. The recognized portion of gains and losses from the prior four years was then combined with the recognized portion of the loss from this year (see page B-14) resulting in a rate of return on the System's funding value of assets of 6.30%, which was lower than the assumed rate of return of 6.75%. As of June 30, 2024, the Funding Value of assets is approximately \$1.8 million higher than the Market Value. In the absence of offsetting favorable experience, contribution rates are expected to trend upward over the next two years due to recognition of investment losses.

## Assumption and Method Changes

There were no assumption or method changes since the June 30, 2023 valuation.

## Benefit Changes

The following benefit changes were made since the last valuation:

- Member contributions are 4.00% of pay during DROP participation for Firefighters.

This change decreased the City's fiscal year 2026 contribution rate by 0.27%.

## Comments (Concluded)

### Amortization of Unfunded Liabilities

The contribution for the unfunded liability is calculated using a level percent-of-payroll method which assumes that *total payroll* will grow 2.75% per year. Total payroll growth at that rate has not been consistently realized in recent years. The Board may wish to consider changing from a level percent-of-payroll method to a level dollar amortization method so that the amortization of the unfunded liabilities is not dependent upon future payroll. This change would increase expected contributions in the near term, but lower expected contributions in the long term.

Given the length of the System's amortization method (currently 22 years), beginning with the fiscal year that begins July 1, 2025, the unfunded liabilities are no longer expected to grow in the near term (i.e., negative amortization), however it will be several years before significant progress is made in paying down the unfunded liability. Changing the amortization policy by shortening the period and/or switching to a level dollar method would help address the relatively high ratio of net cash flow to assets (see Appendix 3-1 for details). Negative ratios are expected for a mature system, and in the long term, are commonly on the order of -4%. However, this ratio has averaged -5.6% over the last five years.

## Other Observations

### Future Expected System Contributions and Funded Status

Given the System's contribution allocation procedure, *if all actuarial assumptions are met (including the assumption of the System earning 6.75% on the funding value of assets)*, it is expected that:

- (1) The employer normal cost as a percentage of pay will decrease to the level of the benefit provisions for current new entrants (Police Command hired after 3/1/2014, Police hired after 2/22/2013, and Fire hired after 9/12/2011) as time passes;
- (2) The unfunded actuarial accrued liabilities will be fully amortized after 22 years (June 30, 2047); and
- (3) The funded status of the plan will increase gradually towards a 100% funded ratio.

### Limitations of Funded Status Measurements

Unless otherwise indicated, a funded status measurement presented in this report is based upon the actuarial accrued liability and the actuarial value of assets. Unless otherwise indicated, with regard to any funded status measurements presented in this report:

- (1) The measurement is inappropriate for assessing the sufficiency of System assets to cover the estimated cost of settling the System's benefit obligations (for example, transferring the liability to an unrelated third party in a market value type transaction).
- (2) The measurement is dependent upon the actuarial cost method which, in combination with the System's amortization policy, affects the timing and amounts of future contributions. The amounts of future contributions will most certainly differ from those assumed in this report due to future actual experience differing from assumed experience based upon the actuarial assumptions. The current funded status is 66.2%. Even if the funded status measurement in this report was 100%, it would not be synonymous with no required future contributions. If the funded status were 100%, the System would still require future normal cost contributions (i.e., contributions to cover the cost of the active membership accruing an additional year of service credit).
- (3) The measurement would produce a different result if the market value of assets were used instead of the actuarial value of assets.

# Risks Associated with Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the System's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. **Investment Risk** – actual investment returns may differ from the expected returns;
2. **Asset/Liability Mismatch** – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. **Contribution Risk** – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
4. **Salary and Payroll Risk** – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. **Longevity Risk** – members may live longer or shorter than expected and receive pensions for a period of time other than assumed; and
6. **Other Demographic Risks** – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise, if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The computed contribution shown on page A-2 may be considered as a minimum contribution rate that complies with the Board's funding policy. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

## **SECTION B**

---

### **SUMMARY OF BENEFIT PROVISIONS AND VALUATION DATA**

# Brief Summary of Act 345 Benefit Provisions (June 30, 2024)

Eligibility	Amount
<b>Service Retirement</b>	
20 or more years of service regardless of age.	
Police Command hired before March 1, 2014, Police Officers hired before February 22, 2013, and Firefighters hired before September 12, 2011.	Straight life pension equals 2.8% of highest 3-year AFC in last 10 years times years of service up to 25 years.
Police Command hired on or after March 1, 2014.	Straight life pension equals 2.5% of highest consecutive 5-year AFC in last 10, times years of service up to 25 years.
Police Officers hired on or after February 22, 2013.	Straight life pension equals 2.5% of highest 5-year AFC in last 10, times years of service up to 25 years.
Firefighters hired on or after September 12, 2011.	Straight life pension equals 2.5% of highest 3-year AFC in last 10, times years of service up to 25 years.
Maximum Benefits.	Benefit cannot exceed 100% of base wages at the time of retirement (or DROP election) for Police Officers retiring after August 28, 2018.

### Deferred Retirement

10 or more years of service.	Computed as service retirement but based upon service, AFC and plan provisions in effect at termination. Benefit begins at date retirement would have occurred had member remained in employment.
------------------------------	---

### Deferred Retirement Option Plan (DROP)

20 or more years of service regardless of age. (Closed to Police Command hired after March 1, 2014. See page B-4 for additional information.)	Computed as a service retirement but based on service, AFC and plan provisions at the time of DROP election. Monthly pension benefits and annuity withdrawal account value at DROP date accumulate in hypothetical accounts and accrue interest at a rate of 4% (2% for eligible Police and Command who DROP on or after June 16, 2014) from date of DROP election to date of retirement. At retirement the hypothetical accounts may be paid out by any distribution alternatives available under the Premium Member Annuity Withdrawal Plan and the monthly benefit (previously computed) is paid to the member in the form of a straight life pension (with survivor benefit option, if applicable).
--	---

# Brief Summary of Act 345 Benefit Provisions (Continued) (June 30, 2024)

Eligibility	Amount
<b>Death After Retirement Survivor's Pension</b>	
<p>Payable to surviving spouse, if any, upon the death of a retired member who was receiving a straight life pension which was effective July 1, 1975 or later. Includes members who DROP effective July 1, 1999.</p>	<p>Spouse's pension equals 60% of the straight life pension the deceased retiree was receiving. Must be married to spouse at time of retirement for spouse to be eligible for survivor benefits.</p>
<b>Duty Death-in-Service Survivor's Pension</b>	
<p>Payable to a surviving spouse and eligible children of a member who died in the line of duty.</p>	<p>Straight life pension, calculated with a minimum of 25 years of service, actuarially reduced in accordance with Option 1 election. Workers' Compensation offset.</p>
<b>Non-Duty Disability</b>	
<p>Payable upon the total and permanent disability of a member with 5 or more years of service.</p>	<p>To age 55: 1.5% of AFC times years of service. At age 55: 2.0% of AFC times years of service.</p>
<b>Duty Disability</b>	
<p>Payable upon the total and permanent disability of a member in the line of duty...</p> <p>Police:</p> <p>...who is unable to perform any occupation</p> <p>...who is unable to perform own occupation</p> <p>Fire:</p>	<p>To age 55: 100% of base salary at time of retirement, minimum 85% of active base. At age 55: Frozen at age 55 rate.</p> <p>To age 55: 60% of base salary at time of retirement, minimum 51% of active base. At age 55: Frozen at age 55 rate.</p> <p>To age 55: Either 1) 80% of base salary for the first 5 years, then 60% of base salary, or, 2) 60% of base salary with 51% minimum. At age 55: Frozen at age 55 rate.</p>
<b>Post-Retirement Increases</b>	
<p>An ad-hoc increase was granted during the year ended June 30, 2000.</p>	
<b>Service Purchases</b>	
<p>Fire employees may purchase up to three years of service for vesting purposes.</p>	

# Brief Summary of Act 345 Benefit Provisions (Concluded) (June 30, 2024)

Eligibility	Amount
<b>Member Contributions</b>	
Fire Chief.	3.00% of pay, non-refundable (Not applicable if in the DROP).
Fire hired before September 12, 2011.	6.00% of pay, non-refundable.
Police Officers hired before February 22, 2013. Police Command and Deputy Chiefs hired before March 1, 2014.	6.00% of pay, non-refundable. Police contribute 1.00% of pay while in the DROP.
Fire hired on or after September 12, 2011.	6.00% of pay, non-refundable.
Police Officers hired on or after February 22, 2013. Police Command and Deputy Chiefs hired on or after March 1, 2014.	6.00% of pay, non-refundable.  All members are eligible for annuity withdrawal with no reduction upon retirement for refundable contributions only. Non-refundable contributions remain in the Retirement System. Fire contribute 4% of pay while in the DROP. Police (Officers, Command, and Deputy Chiefs) contribute 1% of pay while in the DROP.
<b>Interest on Member Accounts</b>	
Active or Former members who have not DROPPed.	Interest at the rate of 2% per annum is paid on member contributions from date of hire to the earlier of DROP date or retirement date.
DROPPed members.	Interest at the rate of 4% (2% for eligible Police Officers and Command hired as Police Officers prior to June 16, 2014, that DROP on or after June 16, 2014) per annum is paid on DROP account and annuity withdrawal account from DROP date to retirement date.
<b>Items Included in AFC</b>	
All members.	Overtime, longevity, pay in lieu of holiday time, education pay, and FLSA.
Police and Police Command.	75% of annual excess (over 1,200 hrs.) sick leave, paid compensatory time, and early report time.
Deputy Chiefs.	Up to 900 hours of unused sick/vacation/comp. leave.

# Summary of DROP Provisions

## Effective Date

July 1, 1999.

## Eligibility

A member of the Southfield Fire and Police Retirement System who has satisfied the minimum requirements for a normal service retirement under the FPRS. This eligibility is currently 20 years of service. The DROP is closed to Police Command hired or promoted after March 1, 2014. However, if a promoted Command member was a Police member, they retain the ability to DROP. In addition, if a Police member is promoted while in the DROP, the member may remain in the DROP.

## Election of DROP

A member satisfying DROP eligibility conditions would be permitted to either:

- 1) Retire; or
- 2) Continue working and retire at a future date with a pension based on credited service and Average Final Compensation (AFC) at date of termination of employment; or
- 3) Irrevocably elect to participate in the DROP and retire at a date no more than 6 years in the future with a pension based on AFC and service at date of election to participate in the DROP.

## DROP Credits

The account of a participating member is credited with:

- The pension payments the member would have been paid if the member had retired on the date of DROP election; and
- Interest credits at the rate of 4% (2% for Police Officers and Command (who were Police Officers) who DROP on or after June 16, 2014) per annum.

## Retirement from DROP

Upon termination of employment the frozen monthly pension begins and the member can elect any of the distribution alternatives available under the Premium Member Annuity Withdrawal Plan for the DROP account.

# Summary of DROP Provisions (Concluded)

## Disability or Death during DROP Participation

Benefits payable to a member (or surviving spouse) if death or disability occurs during the DROP participation period will be computed in the same manner as if the member had retired from the DROP plan the day prior to the death or disability.

## Covered Payroll

The payroll of DROP participants will be included in the covered compensation upon which regular City contributions are based. Police Officers, Police Command, and Deputy Chiefs contribute 1.00% of compensation while in the DROP. Firefighters contribute 4.00% of compensation while in DROP.

## Revocation of DROP Election

Under certain, limited circumstances, members who become disabled in the line of duty, or who die in the line of duty, may revoke the DROP election and be treated as if they never participated in the DROP plan.

# Summary of Reserve for Inflation Equity (RIE) Provisions

## Effective Date

October 25, 1999 for Fire and July 1, 2000 for Police Command.

## Coverage of Program

All members retiring after July 1, 1999 for Fire and July 1, 2000 for Police Command.

## Accumulation Formula

Each year, beginning July 1, 1999 for Fire and July 1, 2000 for Police Command, funds will be credited to the RIE fund in accordance with the following formula: 55% of the 5-year average of the funding value rate of return over a threshold of 8.0% as of June 30<sup>th</sup>, not to exceed 3.0%, multiplied by the System assets of retired member and members who have elected to participate in the Deferred Retirement Option Plan (DROP), who will be eligible to receive distributions from the RIE program either now or in the future. (This Accumulation Formula can be found on page B-15 of this report.) The RIE receives interest each year at the valuation interest rate in effect for the preceding valuation.

## Point Accumulation

Each covered member shall accumulate points in accordance with the following formula:

- a) One point for each full year of service, not to exceed 25; plus
- b) Two points for each full year since retirement.

## Eligibility for Distribution

A covered member will be eligible for an immediate distribution on the later of (a), (b), or (c) below:

- a) The first July 1<sup>st</sup>, which is at least five years after the member's retirement, defined as the later of the date that a member either separated from service or began to receive a pension.
- b) The year after the member's pension has lost 15% of its original purchasing power, defined as a 15% increase in the Consumer Price Index for All Urban Consumers (CPI-U), U. S. City average, all items 1982-1984 = 100.
- c) The member's accumulation of 35 points.

## Distributable Reserve

No more than 35% of the funds in the RIE fund shall be distributed in any given year.

# Summary of Reserve for Inflation Equity (RIE) Provisions (Concluded)

## Individual Distributions

Each benefit recipient's share will be computed by dividing the benefit recipient's total points by the total points of all eligible benefit recipients and multiplying the result by the Distribution Reserve. The maximum amount payable to any benefit recipient is the amount which would restore 85% of the member's original purchasing power. A surviving spouse of a member will receive 60% of the amount which would have been payable to the member had the member survived.

## Distribution Date

Distributions of RIE Program benefit checks shall be determined by the City of Southfield Fire and Police Retirement Board for years in which sufficient funds are available for distribution.

Accounts Payable	(22,413,867)	Funding Value of Pension Assets <sup>(2)</sup>	\$ 201,558,565
Funding Value Adjustment	<u>1,842,034</u>	Reserve for Inflation Equity	<u>-</u>
<b>Actuarial Value of Assets</b>	<b><u>\$ 201,558,565</u></b>	<b>Actuarial Value of Assets</b>	<b><u>\$ 201,558,565</u></b>

<sup>(1)</sup> Note that these reserve amounts were not supplied by staff. We have set the Employee's Contributions Reserve to the sum of the employee contributions submitted for each individual in the valuation. The Retired Benefit Payments Reserve has been set equal to the liability for retired members. The Employer Contribution Reserve is the balancing item.

<sup>(2)</sup> The funding value of pension assets includes \$18,815,439 of retiree account balances to be disbursed (\$1,177,722 of outstanding employee contributions and \$17,637,717 of outstanding DROP account balances).

Market value of assets was reported to be \$199,716,531.

## Revenues and Expenditures

	Pension	Reserve for Inflation Equity	Totals
<b>Actuarial Value 6/30/2023</b>	\$ 198,356,713	\$ 107,160	\$ 198,463,873
<b>Revenues</b>

(b) 0.20 x Gain/(Loss)	410,838				
(c) Base from 1 year ago	456,250	\$ 410,838			
(d) Base from 2 years ago	(6,522,038)	456,250	\$ 410,838		
(e) Base from 3 years ago	8,189,943	(6,522,038)	456,250	\$ 410,838	
(f) Base from 4 years ago	<u>(3,405,959)</u>	<u>8,189,941</u>	<u>(6,522,038)</u>	<u>456,250</u>	<u>\$ 410,837</u>
(g) Total Income Recognized	\$ 12,213,776	\$ 2,534,991	\$ (5,654,950)	\$ 867,088	\$ 410,837
<b>End of Year Values</b>					
(8) Market Value	\$ 199,716,531				
(9) Funding Value (2) + (3) + (7)(g)	\$ 201,558,565				
(10) Funding Value as a Percent of Market Value	100.92%				
(11) Rate of Return on Funding Value During Year	6.30%				
(12) Rate of Return on Market Value During Year	8.01%				

Beginning June 30, 2012, all values exclude assets and activity associated with RIE assets.

The funding value in (9) is applied to the financing of actuarial accrued liabilities. The funding value is intended to give recognition to long-term changes in asset values while minimizing the effect of short-term fluctuations in the capital markets. After the initial year, the funding value treats realized and unrealized capital gains and losses in the same manner.

## Derivation of Reserve for Inflation Equity

## **SECTION C**

---

### **SUMMARY OF ACTUARIAL COST METHODS AND ASSUMPTIONS**

## Actuarial Cost Methods

Normal cost and the allocation of benefit values between service rendered before and after the valuation date was determined using an individual entry-age actuarial cost method having the following characteristics:

- The annual normal costs for each individual active member, payable from the date of employment to the date of retirement are sufficient to accumulate the value of the member's benefit at the time of retirement; and
- Each annual normal cost is a constant percentage of the member's year-by-year projected covered pay.

**Financing of Unfunded Actuarial Accrued Liabilities.** Unfunded actuarial accrued liabilities (the portion of total liabilities not covered by present assets or expected future normal cost contributions) were amortized by level percent-of-payroll contributions over a period of 22 years. This UAAL payment reflects payments expected to be made between the valuation date and the date contributions determined by this report are scheduled to begin.

**The funding value of assets** used for funding purposes is derived as follows: prior year valuation assets are increased by contribution and expected investment income and reduced by refunds, benefit payments and investment expenses. To this amount is added 20% of the difference between expected and actual investment income for each of the previous five years, starting with the June 30, 2012 valuation.

## Actuarial Assumptions Used for the Valuation

The actuary calculates the contribution requirements and benefit values of the Fund by applying actuarial assumptions to the benefit provisions and people information furnished, using the actuarial cost methods described on the previous page.

The principal areas of financial risk which require assumptions about future experiences are:

- Long-term rates of investment return to be generated by the assets of the Fund;
- Patterns of pay increases to members;
- Rates of mortality among members, retirees and beneficiaries;
- Rates of withdrawal of active members (without entitlement to a retirement benefit);
- Rates of disability among members;
- The age patterns of actual retirement; and
- Rate of increase in the cost of retiree health insurance.

In making a valuation, the actuary calculates the monetary effect of each assumption for as long as a present covered person survives – a period of time which can be as long as a century.

---

Actual experience of the System will not coincide exactly with assumed experience, regardless of the accuracy of the assumptions, or the skill of the actuary and the precision of the many calculations made. Each valuation provides a complete recalculation of assumed future experience and considers all past differences between assumed and actual experience. The result is a continual series of adjustments (usually small) to the computed contribution rate.

From time to time it becomes appropriate to modify one or more of the assumptions, to reflect experience trends (but not random year-to-year fluctuations). The assumptions are established by the Board after consulting with the actuary. New assumptions were adopted for the June 30, 2021 valuation pursuant to the Experience Study dated March 19, 2021, which contains the rationale for these assumptions. All assumptions are based on future expectations, not market measures.

## Actuarial Assumptions Used for the Valuation

*The rates of salary increase* used for individual members are in accordance with the following table. This assumption is used to project a member’s current salary to the salaries upon which benefit amounts will be based.

<b>Salary Increase Assumptions for Individual Members</b>			
<b>Years of Service</b>	<b>Merit &amp; Seniority</b>	<b>Base (Economic)</b>	<b>Increase Next Year</b>
1 to 3	10.00%	2.75%	12.75%
4	5.00%	2.75%	7.75%
5	2.00%	2.75%	4.75%
6	1.00%	2.75%	3.75%
7	0.50%	2.75%	3.25%
8	0.25%	2.75%	3.00%
9 & Up	0.25%	2.75%	3.00%

If the number of active members remains constant, then the total active member payroll will increase 2.75% annually, the base portion of the individual salary increase assumptions. This increasing payroll was recognized in amortizing Unfunded Actuarial Accrued Liabilities.

*The assumed nominal rate of investment return* net of investment expenses was 6.75% a year compounded annually. This assumption is used to make money payable at one point in time equal in value to a different amount of money payable at another point in time. *The assumed real return* for funding purposes is the rate of return in excess of wage inflation: 4.00%.

## Actuarial Assumptions Used for the Valuation

*The mortality table* for healthy retirees was the Pub-2010 amount-weighted Safety Healthy Retiree mortality tables with fully-generational projected mortality improvement based on the MP-2020 2-dimensional improvement scale released by the Society of Actuaries.

Age	Post-Retirement Healthy Life Expectancy Determined by Age in Given Future Year					
	Year 2024		Year 2034		Year 2044	
	Male	Female	Male	Female	Male	Female
50	35.60	37.57	36.46	38.41	37.30	39.21
55	30.54	32.47	31.38	33.29	32.20	34.08
60	25.65	27.56	26.45	28.35	27.24	29.11
65	21.03	22.91	21.77	23.63	22.50	24.34
70	16.73	18.51	17.37	19.14	18.03	19.78
75	12.81	14.44	13.34	14.97	13.90	15.53
80	9.39	10.83	9.79	11.26	10.23	11.70

For mortality of disabled retirees, Pub-2010 Safety Disabled Retiree mortality tables with fully-generational projected mortality improvement based on the MP-2020 2-dimensional improvement scale was used.

For pre-retirement mortality the Pub-2010 Safety Disabled Retiree mortality tables with fully-generational projected mortality improvement based on the MP-2020 2-dimensional improvement scale was used. 50% of the pre-retirement deaths are assumed to be duty related and 50% are assumed to be non-duty related.

Additional margin for future mortality improvements are included in the projection scale.

## Actuarial Assumptions Used for the Valuation

*The rates of retirement* used to measure the probability of eligible members retiring during the next year were as follows:

Years of Service	% Retiring during the Next Year		
	Fire	Police with 2.8% Multiplier	Police with 2.5% Multiplier
20	10.0 %	10.0 %	10.0 %
21	5.0	5.0	5.0
22	5.0	5.0	5.0
23	5.0	5.0	5.0
24	10.0	20.0	15.0
25	15.0	20.0	15.0
26	15.0	25.0	15.0
27	15.0	25.0	15.0
28	25.0	25.0	20.0
29	50.0	50.0	50.0
30	50.0	50.0	50.0
31	50.0	50.0	50.0
32	50.0	50.0	50.0
33	50.0	50.0	50.0
34	50.0	50.0	50.0
35 & Up	100.0	100.0	100.0

A member is eligible for retirement after completing 20 or more years of service.

Active members in the DROP are assumed to follow the retirement rates above. However, they are assumed to retire at a rate of 100% in the sixth year.

## Actuarial Assumptions Used for the Valuation

**Rates of separation from active membership** were as shown below (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members remaining in employment.

Sample Ages	Years of Service	% of Active Members Separating within the Next Year
ALL	0	7.00%
	1	5.00%
	2	5.00%
	3	5.00%
	4	1.00%
20	5 & Over	1.00%
25		1.00%
30		0.90%
35		0.65%
40		0.50%
45		0.35%
50		0.25%
55		0.20%
60		0.20%
65		0.20%
70		0.20%

**Rates of disability** were as follows:

Sample Ages	% of Active Members Becoming Disabled within the Next Year	
	Men	Women
20	0.09%	0.04%
25	0.11%	0.06%
30	0.12%	0.09%
35	0.18%	0.16%
40	0.25%	0.23%
45	0.39%	0.34%
50	0.63%	0.54%
55	1.10%	0.92%
60	1.84%	1.33%

In addition, 25% of the disabilities are assumed to be non-duty related and 75% are assumed to be duty related; of the 75% assumed to be duty disability, half were assumed to be covered under their own occupation provisions.

**Expense Load.** The normal cost load for administrative expenses is calculated by using the actual ratio of last year's expenses and valuation payroll. For this valuation, the expense load is 0.71%.

# Miscellaneous and Technical Assumptions

## June 30, 2024

<b>Marriage Assumption:</b>	100% are assumed to be married for purposes of death-in-service benefits and 84% are assumed to be married for deaths after retirement. Male spouses are assumed to be three years older than female spouses.
<b>Pay Increase Timing:</b>	Beginning of the valuation year.
<b>Decrement Timing:</b>	Decrements of all types are assumed to occur mid-year.
<b>Eligibility Testing:</b>	Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
<b>Decrement Relativity:</b>	Decrement rates are used directly from experience, without adjustment for multiple decrement table effects.
<b>Decrement Operation:</b>	Only withdrawal operates the first 5 years of service. Only mortality operates during retirement eligibility.
<b>Service Credit Accruals:</b>	It is assumed that members accrue one year of service credit per year.
<b>Incidence of Contributions:</b>	Contributions are assumed to be received continuously throughout the year based upon the computed percent-of-payroll shown in this report, and the actual payroll payable at the time contributions are made.
<b>Normal Form of Benefit:</b>	A 60% automatic joint and survivor payment is the assumed normal form of benefit for married people.
<b>Benefit Service:</b>	Exact fractional service is used to determine the amount of benefit payable.
<b>Salary Adjustment:</b>	Active members whose salary decreased greater than 30% since the previous valuation were assumed to have the same salary as the prior year. Newly hired active members with a reported salary less than \$15 thousand were assumed to have a salary based on the average salary of newly hired members of their benefit group.
<b>Base Wages Benefit Cap:</b>	AFC is decreased by 3% for Police Officers hired before February 22, 2013 upon reaching 25 years of service to reflect that retirement benefits may not exceed base wages.

## **SECTION D**

---

### **OPERATION OF THE RETIREMENT SYSTEM**

## Basic Financial Objective and Operation of the Retirement System

**Benefit Promises Made Which Must Be Paid For.** A retirement program is an orderly means of handing out, keeping track of, and financing contingent pension promises to a group of employees. As each member of the retirement program acquires a unit of service credit they are, in effect, handed an "IOU" which reads: "The Retirement System promises to pay you one unit of retirement benefits, payments in cash commencing when you retire."

The principal related financial question is: When shall the money required to cover the "IOU" be contributed? This year, when the benefit of the member's service is received? Or, some future year when the "IOU" becomes a cash demand?

The Constitution of the State of Michigan is directed to the question:

"Financial benefits arising on account of service rendered in each fiscal year shall be funded during that year and such funding shall not be used for financing unfunded accrued liabilities."

This Retirement System meets this constitutional requirement by having the following **Financial Objective: To establish and receive contributions, expressed as percents of active member payroll, which will remain approximately level** from year-to-year and will not have to be increased for future generations of taxpayers.

Translated into actuarial terminology, a level percent-of-payroll contribution objective means that the contribution rate must be at least:

**Normal Cost** (the value of benefits likely to be paid which is assigned to service being rendered in the current year)

... plus ...

**Interest on the Unfunded Actuarial Accrued Liability** (the difference between the actuarial accrued liability and current System assets).

## Basic Financial Objective and Operation of the Retirement System

If contributions to the retirement program are less than the preceding amount, the difference, *plus investment earnings not realized thereon*, will have to be contributed at some later time, or, benefits will have to be reduced, to satisfy the fundamental fiscal equation under which all retirement programs must operate; that is:

$$B = C + I - E$$

**B**enefit payments to any group of members and their beneficiaries cannot exceed the sum of:

**C**ontributions received over time on behalf of the group

... plus ...

**I**nterest earnings on contributions received and not required for immediate payment of benefits

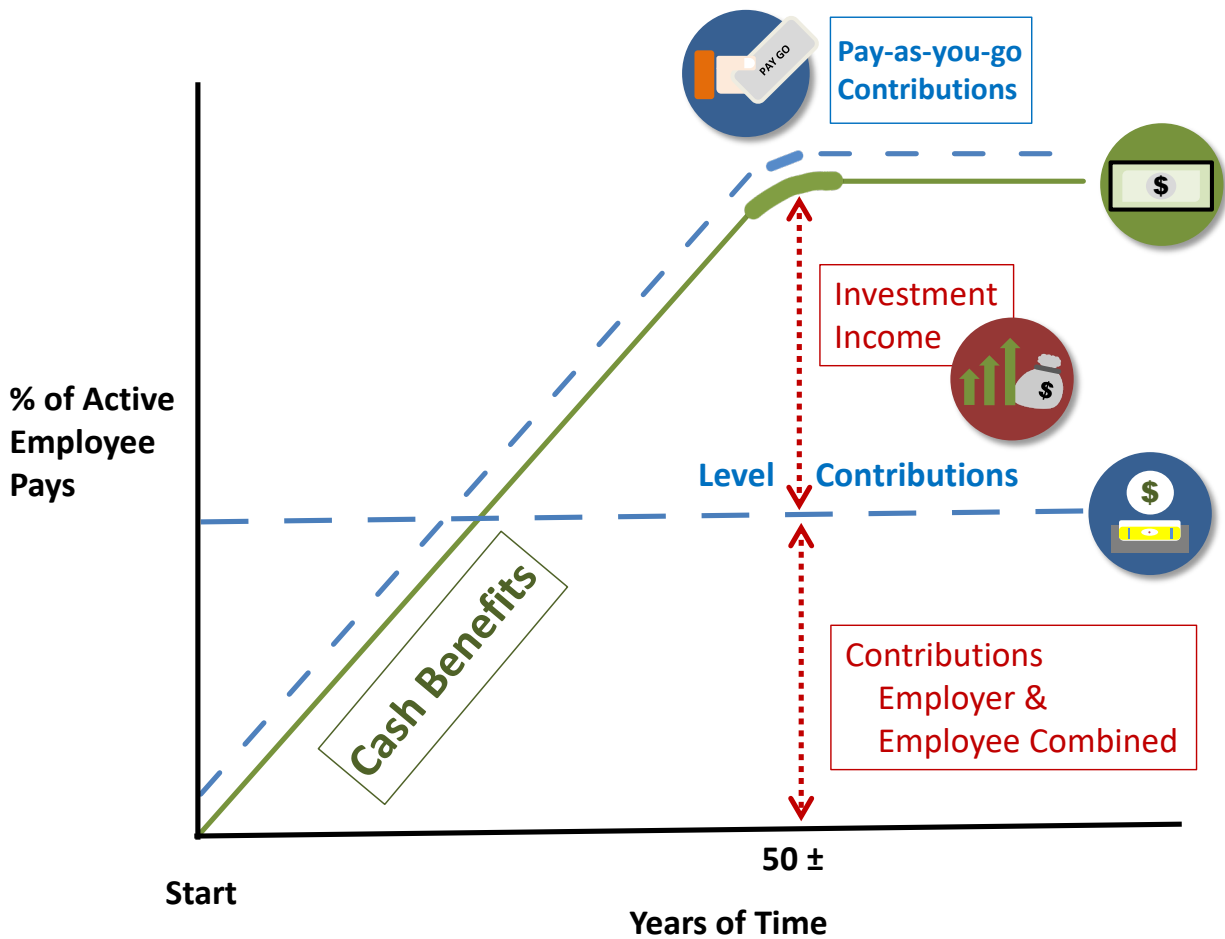

... minus ...

**E**xpenses incurred in operating the program.

There are retirement programs designed to defer the bulk of contributions far into the future. They are lured by artificially low present contributions, but the inevitable consequence is a relentlessly increasing contribution rate to a level greatly in excess of the level percent-of-payroll rate. ***This method of financing is prohibited in Michigan by the State constitution.***

A by-product of the level percent-of-payroll contribution objective is the accumulation of invested assets for varying periods of time. Invested assets are a by-product of level percent-of-payroll contributions, not the objective. Investment income becomes a major contributor to the retirement program, and the amount is directly related to the amount of past contributions and investment performance.

**Computed Contribution Rate Needed to Finance Benefits.** From a given schedule of benefits and from the data furnished, the actuary calculates the contribution rate ***by means of an actuarial valuation*** - the technique of assigning monetary values to the risks assumed in operating a retirement program.

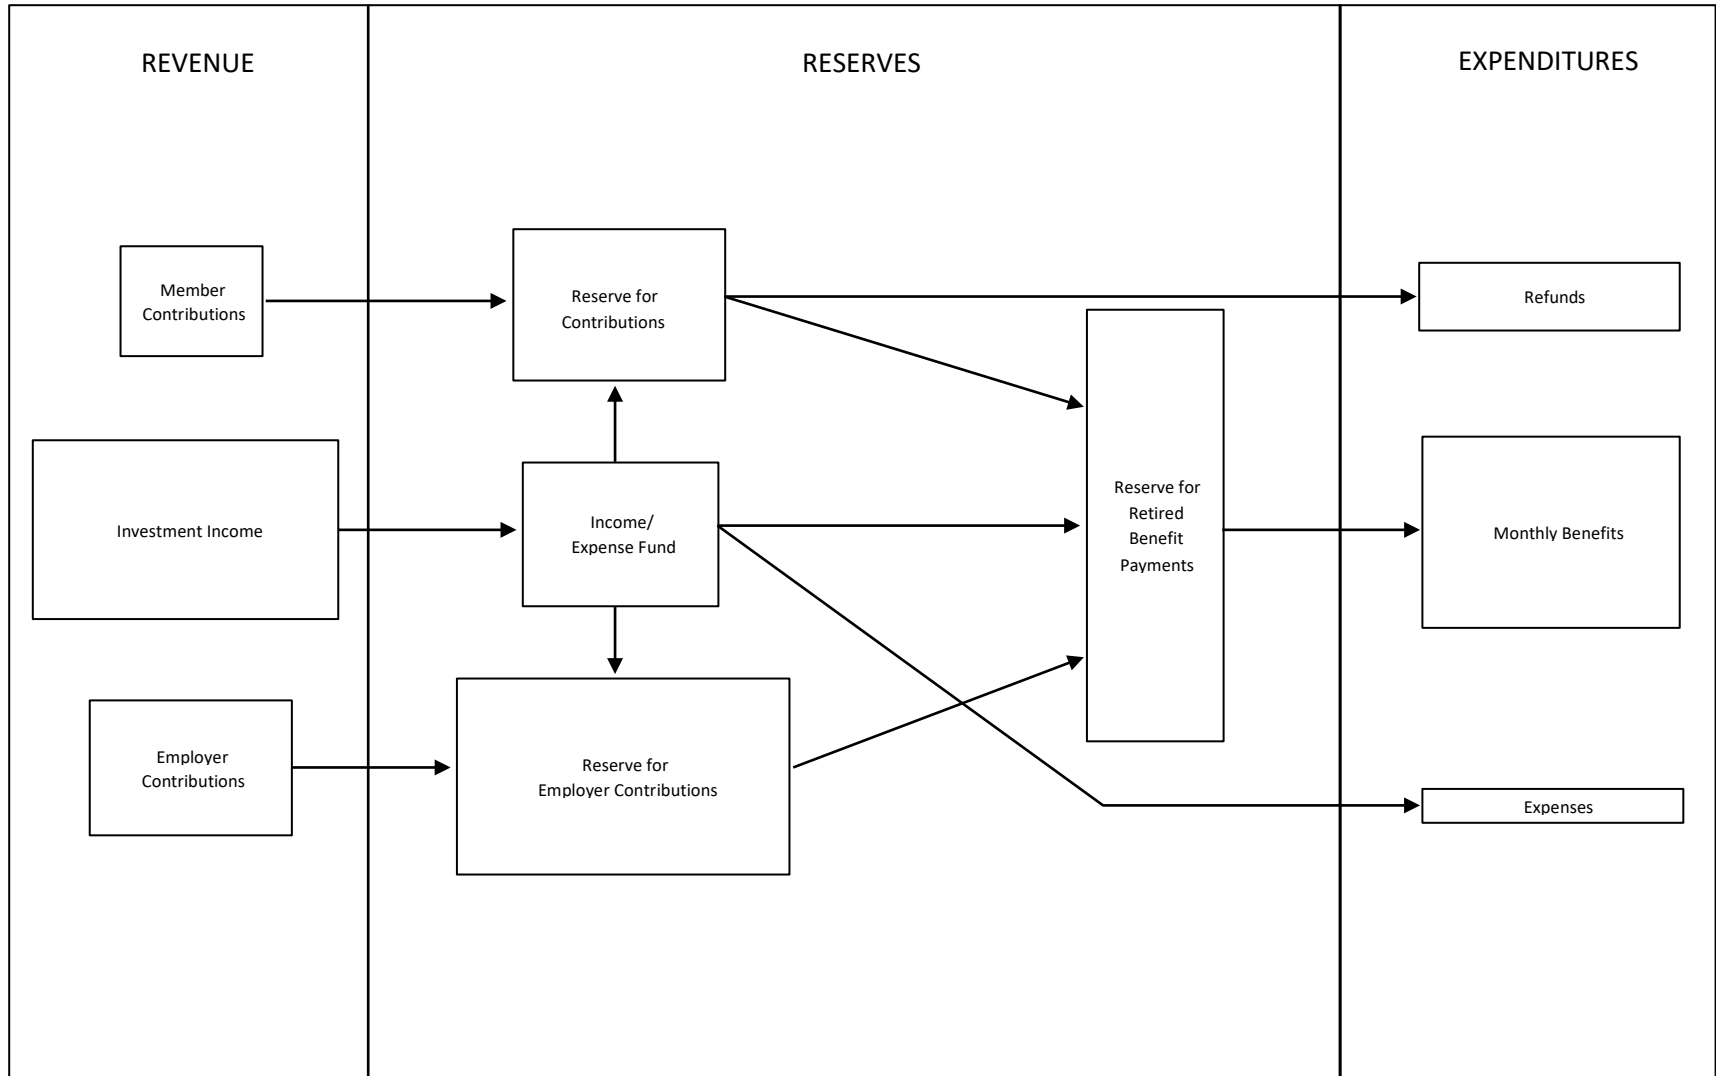

**CASH BENEFITS LINE.** This relentlessly increasing line is the fundamental reality of retirement plan financing. It happens each time a new benefit is added for future retirements (and happens regardless of the design for contributing for benefits).

**LEVEL CONTRIBUTION LINE.** Determining the level contribution line requires detailed assumptions concerning a variety of experiences in future decades, including:

- **Economic Risk Areas**
  - Rates of investment return
  - Rates of pay increase
  - Changes in active member group size
- **Non-Economic Risk Areas**
  - Ages at actual retirement
  - Rates of mortality
  - Rates of withdrawal of active members (turnover)
  - Rates of disability

# Flow of Money Through the Retirement System

## Glossary

<b>Actuarial Accrued Liability</b>	The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as "accrued liability" or "past service liability."
<b>Accrued Service</b>	The service credited under the plan which was rendered before the date of the actuarial valuation.
<b>Actuarial Assumptions</b>	Estimates of future plan experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement assumptions (rates of mortality, disability, turnover and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate in an inflation-free environment plus a provision for a long-term average rate of inflation.
<b>Actuarial Cost Method</b>	A mathematical budgeting procedure for allocating the dollar amount of the "actuarial present value of future plan benefits" between the actuarial present value of future normal cost and the actuarial accrued liability. Sometimes referred to as the "actuarial funding method."
<b>Actuarial Equivalent</b>	A single amount or series of amounts of equal value to another single amount or series of amounts, computed on the basis of the rate(s) of interest and mortality tables used by the plan.
<b>Actuarial Present Value</b>	The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.
<b>Amortization</b>	Paying off an interest-bearing liability by means of periodic payments of interest and principal, as opposed to paying it off with a lump sum payment.
<b>Experience Gain (Loss)</b>	A measure of the difference between actual experience and that expected based upon a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.
<b>DROP</b>	Deferred Retirement Option Plan. This plan acts like an optional form of payment. It is selected by active members who wish to have their accrued retirement benefit frozen and paid into an account (monthly) that is available for cash withdrawal at the time of retirement.

## Glossary

### **Normal Cost**

The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as "current service cost." Any payment toward the unfunded actuarial accrued liability is not part of the normal cost.

### **Plan Termination Liability**

The actuarial present value of future plan benefits based on the assumption that there will be no further accruals for the future service and salary. The termination liability will generally be less than the liabilities computed on a "going-concern" basis and is not normally determined in a routine actuarial valuation.

### **Reserve Account**

An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

### **Unfunded Actuarial Accrued Liability**

The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as "unfunded accrued liability."

### **Valuation Assets**

The value of current plan assets recognized for valuation purposes. Generally based on book value plus a portion of unrealized appreciation or depreciation.

## **APPENDIX 1**

---

### **ACTUARIAL FUNDING POLICY**

# City of Southfield Fire and Police Retirement System

## Actuarial Funding Policy

**WHEREAS**, the City of Southfield Fire and Police Retirement System (“Retirement System”) is established and administered pursuant to the provisions of Public Act 345 of 1937, as amended (MCL 38.551 *et seq.*), applicable collective bargaining agreements, and applicable state and federal laws including, but not limited to Public Act 314 of 1965, as amended (“Act 314”) [MCL 38.1132 *et seq.*], and

**WHEREAS**, the Board of Trustees of the Retirement System (“Board”) is vested with the authority and fiduciary responsibility for the administration, management and operation of the Retirement System, and

**WHEREAS**, the Board, in consultation with its Actuary, has an obligation to establish the economic and demographic assumptions to be utilized in performing the required actuarial valuation of the Retirement System and in determining the required annual employer contribution to the Retirement System, and

**WHEREAS**, the Board is aware of upcoming changes to the accounting and reporting standards approved by the Governmental Accounting Standards Board (GASB) for public pension plans, and

**WHEREAS**, the Board wishes to establish a formal Actuarial Funding Policy addressing the funding objectives and actuarial assumptions to be utilized in determining the funding status of the Retirement System, therefore be it

**RESOLVED**, that the Board hereby adopts the following Actuarial Funding Policy:

### I. GENERAL

#### A. Purpose

In light of upcoming changes to the GASB financial accounting and reporting standards for public pension plans, the Board of Trustees of the Retirement System desires to establish a formal Actuarial Funding Policy to ensure the systematic funding of future pension obligations of the Retirement System.

#### B. Policy Objectives

Maintain adequate levels of assets sufficient to fund all benefits expected to be paid to members and beneficiaries when due.

- (1) Maintain adequate levels of assets sufficient to fund all benefits expected to be paid to members and beneficiaries when due.
- (2) Maintain stability of employer contributions rates, consistent with other funding objectives.
- (3) Support the public policy goals of accountability and transparency.
- (4) Monitor material risks to assist in any risk management strategies the Board deems appropriate.

- (5) Promote intergenerational equity. Each generation of members and employers should incur the cost of benefits for the employees who provide services to them, rather than deferring costs to future members and employers.
- (6) Provide a reasonable margin for adverse experience to offset risk.
- (7) Review the Plan's investment return assumption, potentially in conjunction with a periodic asset liability study and in consideration of the Board's risk profile.
- (8) Continue the systematic reduction of the Plan's Unfunded Actuarial Accrued Liabilities (UAAL).

## **II. LEGAL**

### **A. Annual Actuarial Valuation**

Section 20h(4) of Act 314 [MCL 38.1140h(4)], requires the Retirement System to have an actuarial valuation performed annually as follows:

Except as otherwise provided in this subsection, a system shall have an annual actuarial valuation with assets valued on a market-related basis. The actuarial present value of total projected benefits shall include all pension benefits to be provided by the system to members or beneficiaries pursuant to the terms of the system and any additional statutory or contractual agreements to provide pension benefits through the system that are in force at the actuarial valuation date, including, but not limited to, service credits purchased by members, deferred retirement option plans, early retirement programs, and postretirement adjustment programs. A system that has less than \$20,000,000.00 is only required to have an actuarial valuation as required under this subsection done every other year.

### **B. Annual Employer Contribution**

The Board is required, pursuant to Section 20m of Act 314 [MCL 38.1140m], to annually certify the annual required contribution to be made by the employer as follows:

The governing board vested with the general administration, management, and operation of a system or other decision-making body that is responsible for implementation and supervision of any system shall confirm in the annual actuarial valuation required under section 20h and the summary annual report required under section 13 that each system under this act provides for the payment of the required employer contribution as provided in this section and shall confirm in the summary annual report that the system has received the required employer contribution for the year covered in the summary annual report. The required employer contribution is the actuarially determined contribution amount. An annual required employer contribution in a system under this act shall consist of a current service cost payment and a payment of at least the annual accrued amortized interest on any unfunded actuarial liability and the payment of the annual accrued amortized portion of the unfunded principal liability. For fiscal years that begin before January 1, 2006, the required employer contribution shall not be determined using an amortization period greater than 40 years. Except as otherwise provided in this section, for fiscal years that begin after December 31,

2005, the required employer contribution shall not be determined using an amortization period greater than 30 years. . . . In a plan year, any current service cost payment may be offset by a credit for amortization of accrued assets, if any, in excess of actuarial accrued liability. A required employer contribution for a system administered under this act shall allocate the actuarial present value of future plan benefits between the current service costs to be paid in the future and the actuarial accrued liability. The governing board vested with the general administration, management, and operation of a system or other decision-making body that is responsible for implementation and supervision of a system shall act upon the recommendation of an actuary and the board and the actuary shall take into account the standards of practice of the actuarial standards board of the American academy of actuaries in making the determination of the required employer contribution.

### **III. POLICY**

#### **A. Actuarial Cost Method**

- (1) The individual entry age actuarial cost method of valuation shall be utilized in determining actuarial accrued liability and normal cost with the following characteristics:
  - (a) the annual normal costs for each individual active member, payable from the date of employment to the date of retirement, are sufficient to accumulate the value of the member's benefit at the time of retirement; and
  - (b) each annual normal cost is a constant percentage of the member's year by year projected covered pay.
- (2) Differences in the past between assumed experience and actual experience (actuarial gains and losses) shall be factored into the actuarial accrued liability.
- (3) The normal cost shall be determined on an individual basis for each active member.

#### **B. Asset Smoothing Method**

The investment gains or losses of each valuation period, resulting from the difference between actual investment return and assumed investment return, shall be recognized annually in level amounts over a period not to exceed five (5) years in calculating the funding value of assets.

#### **C. Amortization Method**

- (1) A level percent of payroll amortization method shall be used to systematically pay off the unfunded actuarial accrued liabilities over a closed amortization period not to exceed 30 years.
- (2) Unfunded liabilities associated with benefit changes or assumption changes shall be funded over a period determined by the Board in consultation with its actuary.
- (3) Unfunded liabilities arising from benefit changes provided to retirees or in conjunction with early retirement incentive programs offered by the employer shall be separately funded over a period determined by the Board in consultation with its actuary.

## **D. Assumptions**

The economic and demographic actuarial assumptions utilized to determine the contribution requirements and benefit values of the Retirement System shall be determined by the Board in consultation with its actuary.

## **E. Funding Target**

- (1) The targeted funded ratio of the Retirement System shall be 100%.
- (2) The employer contribution rate shall at least be equal to the normal cost unless the funded ratio of the Retirement System exceeds 120%.
- (3) A funding plan shall be developed by the Board in consultation with its actuary if the funded ratio of the Retirement System falls below 70%, which may include additional funding requirements.

## **F. Risk Management**

- (1) Assumption Changes
  - (a) The actuarial assumptions utilized to determine the annual contribution requirements and valuations shall be those last adopted by the Board based on the most recent experience study and upon the advice and recommendation of the Board's actuary. The Board's actuary shall conduct an experience study once every five years. The results of the experience study shall be the basis for the actuarial assumptions recommended to the Board.
  - (b) The actuarial assumptions may be revised during the five-year period between experience studies if significant plan design changes or other significant economic events occur, as advised by the actuary.
- (2) Risk Measures. The following risk measures will be annually determined to provide quantifiable measurements of risk as it applies to the Retirement System.
  - (a) Funded ratio;
  - (b) Unfunded actuarial accrued liabilities – the years required to pay down the unfunded liabilities of the Retirement System based upon the current funding schedule;
  - (c) Total unfunded actuarial accrued liabilities as a percentage of total payroll;
  - (d) Total assets as a percentage of total payroll; and
  - (e) Total actuarial accrued liabilities as a percentage of total payroll.
- (3) Risk Control
  - (a) The Board shall carefully monitor the risk measures identified above and shall consider steps to mitigate risk, particularly as the funded ratio increases.

#### **IV. REVIEW AND AMENDMENT**

##### **A. Periodic Review**

This Actuarial Funding Policy shall be reviewed no less frequently than once every five years in conjunction with the required experience study performed by the Board's actuary, and may be reviewed at any time at the Board's discretion.

##### **B. Amendment**

The Board, in consultation with its Actuary and Legal Counsel, may amend this Actuary Funding Policy at any time as deemed necessary to address changes in the makeup, benefit structure and/or funding status of the Retirement System.

## **APPENDIX 2**

---

### **LOW-DEFAULT-RISK OBLIGATION MEASURE**

# Low-Default-Risk Obligation Measure

## Introduction

In December 2021, the Actuarial Standards Board (ASB) adopted a revision to Actuarial Standard of Practice (ASOP) No. 4, *Measuring Pension Obligations and Determining Pension Plan Costs or Contributions*. The revised ASOP No. 4 requires the calculation and disclosure of a liability referred to by the ASOP as the “Low-Default-Risk Obligation Measure” (LDRM). The rationale that the ASB cited for the calculation and disclosure of the LDRM was included in the Transmittal Memorandum of ASOP No. 4 and is presented below (emphasis added):

“The ASB believes that the calculation and disclosure of this measure provides **appropriate, useful information for the intended user regarding the funded status of a pension plan**. The calculation and disclosure of this additional measure is **not intended to suggest that this is the “right” liability measure** for a pension plan. However, the ASB does believe that **this additional disclosure provides a more complete assessment of a plan’s funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date.**”

## Comparing the Accrued Liabilities and the LDRM

One of the fundamental financial objectives of the City of Southfield Fire and Police Retirement System is to finance each member’s retirement benefits over the period from the member’s date of hire until the member’s projected date of retirement (entry age actuarial cost method) as a level percentage of payroll. To fulfill this objective, the discount rate that is used to value the accrued liabilities is set equal to the **expected return** on the System’s diversified portfolio of assets (referred to sometimes as the investment return assumption). The current investment return assumption is 6.75%.

The LDRM is meant to approximately represent the lump sum cost to a plan to purchase low-default-risk fixed income securities whose resulting cash flows essentially replicate in timing and amount the benefits earned (or the costs accrued) as of the measurement date. The LDRM is very dependent upon market interest rates at the time of the LDRM measurement. The lower the market interest rates, the higher the LDRM, and vice versa. The LDRM results presented in this report are based on the entry age actuarial cost method and discount rates based upon the June 2024 Treasury Yield Curve Spot Rates (end of month). The 1-, 5-, 10-, and 30-year rates follow: 5.12%, 4.40%, 4.22% and 4.45%. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan’s benefit obligation.

**The difference between the two measures (Valuation and LDRM) is one illustration of the savings the sponsor anticipates by taking on risk in a diversified portfolio.**

### Accrued Liabilities and LDRM

Valuation Accrued Liabilities	LDRM
\$304,630,811	\$389,184,523

### **RISK MEASURES**

## Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	2024	2023	2022	2021	2020
Ratio of actives to retirees and beneficiaries	0.51	0.51	0.55	0.55	0.58
Ratio of retiree actuarial accrued liability to total liability	72%	71%	67%	66%	66%
Ratio of net cash flow to market value of assets	-5%	-7%	-5%	-6%	-6%

### **RATIO OF ACTIVE TO RETIREES AND BENEFICIARIES**

A young plan with many active members and few retirees will have a high ratio of active to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0.

### **RATIO OF RETIREE ACTUARIAL ACCRUED LIABILITY TO TOTAL LIABILITY**

The ratio of retiree liability to the total actuarial accrued liability gives an indication of the maturity of the plan. As the ratio increases, cash flow needs increase, and the liquidity needs of the portfolio change. A ratio on the order of 50% indicates a maturing system. In the case of a closed plan, this ratio will eventually reach 100%.

### **RATIO OF NET CASH FLOW TO MARKET VALUE OF ASSETS**

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

### **ADDITIONAL RISK ASSESSMENT**

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

## Risk Measures

Actuarial Valuation Date	(1) Actuarial Value of Assets	(2) Actuarial Accrued Liability (AAL) Entry Age	(3) Unfunded AAL (UAAL) (2) - (1)	(4) Covered Payroll	(5) Funded Ratio (1) / (2)	(6) Assets / Payroll (1) / (4)	(7) Liability / Payroll (2) / (4)	(8) Unfunded / Payroll (3) / (4)

*(a) Revised actuarial assumptions, methods, and/or benefit changes.*

(5) The Funded Ratio is the most widely known measure of a retirement system’s financial strength, but the trend in the funded ratio is much more important than the absolute ratio. The funded ratio should trend to 100%. As it approaches 100%, it is important to re-evaluate the level of investment risk in the portfolio and potentially to re-evaluate the assumed rate of return.

(6) and (7) The ratios of assets and liabilities to payroll gives an indication of both maturity and volatility. Many systems have ratios between 500% and 700%. Ratios significantly above that range may indicate difficulty in supporting the benefit level as a level % of pay. For systems that are closed to new hires, it is expected that these ratios will grow as payroll declines.

(8) The ratio of the unfunded liability to payroll gives an indication of the retirement system sponsor’s ability to actually pay off the unfunded liability. A ratio above approximately 300% or 400% may indicate difficulty in discharging the unfunded liability within a reasonable time frame.
